DewEze Flatbeds have proven their durability and trouble free performance in livestock operations across the United States. Simple maintenance done once a year keeps you up and going throughout the feeding season. It's hard to find such reliability in anything but a DewEze!

400-500 Series Balebeds

First, with the remote control, use the unload function to lower the arms, and then the in function to squeeze the bale. After securing, use the load function to bring the bale on top of the bale bed, and use the out function to release the bale. For a second bale, repeat process and push the first bale forward. Reverse procedure for unloading, all this from the comfort of your pickup seat.
