

Delphi 15317327 (verify)

When connecting to a truck with Body Control Module (BCM) that requires an electrical load equivalent to at least two (2) bulb filaments:

- ✓ This plug will be disconnected
- ✓ The truck-side half will be capped with mating cap
- ✓ The bed-side half will be plugged into an adapter harness
- ✓ Adapter harness will connect to truck **bed** connector, picking up the following terminals:
 - ✓ Right Turn/Stop
 - ✓ Left Turn/Stop
- ✓ This will power (2) red lights via each of the truck's bed turn signal circuits, satisfying the BCM, thereby preventing the "fast flash"

This harness provides "plug & play" connection when both 7-way and 6-way (round) trailer plugs are required. Both plugs must be of the illustrated style to enable the USCAR plug to mate properly and ensure wiring integrity.
