

DRONTAL PLUS contains Praziquantel/ pyrantel pamoate/ febantel

Central Nervous System: Frequent are dizziness, headache and malaise. Drowsiness, fatigue and vertigo have also been seen.

GI Tract: Approximately 90% of all patients have abdominal pain or cramps with or without nausea and vomiting. Diarrhoea may develop and may be severe with colicky. Sweating, fever, and sometimes bloody stools may emerge together with diarrhoea.

Liver: Asymptomatic and transient increases of liver enzymes
Sensitivity Reactions: rash, pruritus, severe itching

Other Locations/Body as a Whole: Low Back Pain, myalgia, arthralgia, fever, sweating, various cardiac arrhythmias, and hypotension.

Using a natural substance, cats and dogs can be more effectively dewormed, at any age, and without risks

Signs of worm infestation in your dog can include squiggly worms or “rice bodies” in his stool, a thrifty looking appearance, scooting and licking his rear, vomiting, and diarrhoea. Luckily, you don’t have to fear worms because there are some safe and simple things you can do, keep your yard clean and free of rodents and fleas will also help.

There are less invasive and more natural products that you might want to try.
