The Power of AutoCAD

A BRIEF OVERVIEW

Life before AutoCAD

Almost 2 decades ago, engineers, architects and draftsmen used to draw all things on paper with the help of drafting tools and pencils. They illustrate their ideas by drawing them out by hand.

Drafting back then was truly time-consuming and a tedious task. Designing and putting everything on paper was a tough job. If there are any revisions on the paper-based design, they need to do the sketches all over again, which is really a major disadvantage.

Benefits of AutoCAD

- Easy Edits: You can easily change and manipulate designs. This also improves the productivity of the designer.
- Faster Production: You can create a re-useable block library to replicate design parts. The saved files can be re-used later, which makes the design process faster.
- Better Accuracy: You can only draw something so small by hand, but AutoCAD allows you to design down to fractions. This creates a more accurate design in all dimensions resulting in quality designs.
- Accessibility: You can save it in a cloud or send it as an email. This improves the communication within your organization.

4 REASONS WHY YOU SHOULD INVEST IN OUTSOURCING AUTOCAD SHOP DRAWINGS AND DRAFTING

1. Increase in efficiency and cost savings.

These services are provided with accuracy in dimensions, measurements, and labels. Using only the latest techniques and technology. Outsourcing companies provide high-quality accuracy in drawings, quotations, and reports with a quick turnaround.

2. Significant reduction in labor costs and business processes.

Pricing is very cost-efficient and considering the excellent quality of service, it can be up to 65% cheaper than employing a person in your company, benefits, office utilities, software, and rentals on equipment.

3. Timezone advantage

The architecture and interior design sector is a deadline-driven environment, sometimes 8 hours working days is not enough to commit to a deadline while managing your project and coordinating with your client. Can you imagine yourself doing all the work from consultations, schematic design phase, working drawings, and design proposals, design implementation to turn over without a team? It is challenging but, with a global team of Engineers, you can directly coordinate with your global team with 24/7 service.

The most important is the flexibility to increase or decrease your team at ease. You can trust that these teams will do a great job handling all the tasks delegated, you can focus on your business strategy and priorities, instead of worrying about increasing your fixed overheads, the deadlines of requirements, etc.

Here are some of the popular sectors that outsource their AutoCAD drafting services :

- 1. Architectural services
- 2. Structural services
- 3. Mechanical engineering
- 4. Electrical engineering
- 5. Plumbing and piping services
- 6. Fire engineering

Checklist in finding the right technical outsourcing company

- O they have a lot of experience with AutoCAD design services?
- \bigcirc Do they offer a competitive rate compared to other outsourcing suppliers?
- O they regularly train and upskill their employees with regards to the latest AutoCAD design tools and systems?
- \bigcirc Do they have client references for you to review?
- Are they equipped to scale with your business?
- O they have a lot of experience with AutoCAD design services?

ADDMORE SERVICES Focus on your Core Business and Outsource

Are you willing to outsource and increase your scalability without affecting your fixed overhead?
