Expressive arts and design

Expressive Arts and Design provides children with valuable opportunities to explore their creativity and express their ideas, thoughts, and feelings through a range of media.

Children engage in activities such as painting, drawing, music, dance, role play, and model making, which help to develop imagination, fine motor skills, and confidence.

Through open-ended, play-based experiences, children are encouraged to experiment with colours, sounds, textures, and materials while learning to share ideas and work collaboratively. These creative experiences support self-expression, enjoyment, and a positive attitude towards learning.
