The list of Seeds on this page are indigenous to the Americas, and available from this Mizz Tizzy's website.

Over 80 native seeds varieties. Description and care for Native Plant gardening.

Interest in plants native to North America, and to specific regions of the Americas, is on the increase for many gardeners. This page lists seeds that are indigenous to the Americas that are available through Mizz Tizzy's website.

Global Benefits from Indigenous American Plants.

Literally hundreds of plants indigenous to the Americas have benefited people all over the world: Quinine from S. America nearly eliminated malaria in Europe. Potatoes ended the cycles of famine so common when European wheat crops failed. Chocolate, tomatoes, vanilla, marigolds, long strain cotton, peppers, and a vast array of herbs of the Americas swiftly naturalized on other continents and island nations improving health, advancing communication and shipping commerce, trade and affordable leisure in life we now take for granted.

Restoring Nature Naturally through Native Plants

Large urban plantings of milkweeds improved the once dwindling migration and populations of Monarch butterflies. Planting more natives for native pollinators that need native plants improves our quality of life as well.

Using This Lsting

Links for more information or to order are included with each native seed type listed here. Original range is listed in brackets [S. America] indicating South America. Most of these can be grown anywhere that is growing-zone friendly, and may already have been naturalized into several other regions. A few seeds are native to other parts of the world besides just the Americas, such as Sunflowers.

We use common names and Latin names. Common names vary for the same plant, and sometimes the same common name is used for different plants.

Amaranthus (South and Central America)

Amorpha fruticosa - Desert False Indigo (Central/Eastern Canada, USA, North Mexico)

Amsonia Illustris (Texas, Missouri, much of South and Central USA)
