Unique Fixed and Portable
Evidential Recording
Solutions

AVET Portable & Fixed Evidential Recorders

The AVET stable of best-in-class evidential recording products are based upon bespoke technology developed by AVET engineers specifically designed to meet the requirements of protecting recorded information that could be relied upon within legal proceedings.

The advantages of the extensive AVET development in evidential technology provide compact and reliable products which have the added benefit of future upgrade paths to offer alternative recording profiles, storage mediums and workflow variations. In short the products are future proof.

This significant improvement in AVET's portable and fixed audio and video interview recording technology, designed for use by law enforcement organisations, enables the permanent and secure recording of audio only or audio and multiple video evidential interviews with victims, witnesses and suspects.

The units comply with modern digital evidence standards and offer an innovative flexible technology solution in a cost competitive package.

Available in fixed portable and mobile configurations and with various storage options from DVD to internal SSD as well as AVET's unique network and highly secure cloud storage solutions, AVET's products will certainly fulfill your requirement.

Exceptionally intuitive to use and lightweight to transport. AVET Recorders are designed to be robust and cost effective. Supplied with all required accessories including microphone, cameras

and GPS for time date and location data, each interview is recorded onto the primary storage device and backed-up internally in case of a primary storage failure. Additionally, an internal battery ensures recording can be completed even when a reliable local power supply is not available. Highly secure network or cloud based storage solutions are also available provided within a unique data anomolised and data sharded environment which has been militarily assessed as unbreakable.

At a time when the advanced editing of digital information is outwardly seamless and easily accessible AVET products protect the true value of information with intuitive and defendable solutions that live with the data from the point of creation. AVET recorders log the binary identical structure of data at a given point in time and safeguard that same data with secure, yet accessible data storage solutions that are unique not just within the digital evidence arena but with data storage in general.

AVET Products Support Equal Access to Justice Regardless of Wealth, Location or Status.
