

Revivify Care Sheet

Once you have received your vehicle back you must wait a minimum of 24 hours before washing your vehicle, it is also necessary to avoid parking under trees or in areas that are likely your vehicle could be contaminated by bird droppings. When washing your vehicle use microfiber mitts with soap and water to ensure the vehicle is effectively cleaned and the coating is not damaged or chipped off. Using a brush or drive through car wash will damage your coating compromising its ability to self-heal and protect your vehicle from contaminants such as, but not limited to; dust, tar and other small road debris sticking to your vehicle. As for tough to get off contaminants such as guts and grime it is not recommended to allow heavy degreasers to sit for an extended period of time on the coating, 2 minutes at most. Iron X is also recommended for effective road debris removal.

DO NOT allow bug guts, bird droppings, or other contaminants stay on your vehicle for extended periods of time as the self-healing coat will heal over the contaminants trapping it inside the coating, this will result in the full affected panel needing to be polished, prepped and recoated. AutoHaven will not be held liable for this and will not cover costs as such, this also applies to scratches, deeper scratches such as an animal jumping on the vehicle or car wash broom brushes.

Warranty Coverage and Important notes.

Revivify's Graphene Pro has valid warranty for 5 years to the day after the coating as been installed for any vehicle 5 model years old or newer. Revivify has been manufactured with advanced SiOx cross link nano structure layer technology paired with incredible self-healing qualities that work using simply the heat. Revivify gives your vehicle excellent protection from UV and chemicals
