

HEFFRON © PRECISION©

COMPONENT PART TRIGGER & ACTION JOB©

Just a few parts from your gun, and you get a complete trigger and action job!

For ALL New Series COLT DOUBLE-ACTION Revolvers.

It's been well-documented in many places. The New Series Colt Double-Action Revolvers are fantastic firearms, but the single-action trigger pull is too heavy. These guns work exactly as they were designed to work. This methodology does leave the shooter with a 5.50-6.00 lbs single-action trigger pull (on their Medium and Large frames) and about 4.00 – 4.50 lbs (on their Small frames), and that is too high for precision shooting.

Heffron Precision© offers the best trigger tuning for these fine revolvers, bar none. We achieve consistently light and crisp pulls, and we achieve this without switching out or modifying springs. The Laws of Physics apply to triggers just like anything else. We have DESIGNED the solution and we offer superior execution for that solution. We don't only address the single-action trigger pull with this service. It's an entire action job! When we're done, the action is smoother, the single-action trigger pull will be around 2.75 lbs and delightfully crisp. The double-action trigger will be around 8.75 lbs and much smoother than before. The trigger reset is quicker and smoother. Overall, the revolver's (Python or Anaconda) action is a complete equal of the Old Series Python's state of tune, maybe even a little smoother. Colt's Cobra, King Cobra, and Viper models will be much smoother with trigger pull weights comparable to our tuned Pythons and Anacondas. Typically, out-of-the-box Old Series Pythons didn't have trigger pulls as light as we achieve with the New Series with this tuning package. Both the single-action and double-action trigger pulls are cleaner as well. Performance at this level has never been so reasonable!

ALL WE NEED ARE SOME OF YOUR PARTS!! That's right. Colt Firearms maintains extremely tight tolerances on these revolvers. We, in turn, maintain tolerances within $\pm .0001"$. We have made precision fixtures which allow us to tune the required parts so we have incredible end results.

SO, WHAT'S REQUIRED? Contact us by email at heffronprecision@outlook.com and let us know that you want the **COMPONENT PART TRIGGER & ACTION JOB©**. We need your name, phone number, email, return shipping address, model of gun, finish, and whether or not you want the **Comfort Contour Trigger©** (Comfort Contour© is only offered for the Python and Grizzly Models as the others don't have the aggressive serrations-we reduce the peaks and contour the edges which makes double-action firing more comfortable). Let us know if you plan on sending a check with your parts, or paying via credit card with an emailed invoice upon completion.

We'll reply with your order number and shipping information. You send us the required parts from your gun, and we do the rest! We can get your parts in immediately, and get the parts completed within a few weeks. Services requiring the entire gun are back-ordered several years. Our **Component Part© Service** allows you to get in right away and get your gun running like it should in very short order. The price is VERY reasonable, and you save a great deal of money on FFL fees and shipping!

These revolvers are simple to disassemble and reassemble. The trouble comes with filing, stoning, polishing, and grinding. **WE TAKE CARE OF THAT!!** A thorough understanding of the Colt mechanism is needed for successful modification. Being only 2 degrees off on the sear angle can render these gun unusable. We perform this service in such a manner that we maintain the correct angles in every location every time. To remove human error, we use dedicated "Part Fixtures" that were made in house. We remove material using a mill. The honing process provides smooth surfaces without dangerously rounding edges or altering crucial angles.

Time savings, money savings, quality work, and the same end result as our tuning formerly known as "The Master Series©". Contact us today for a superior trigger and action!

COMPONENT PART TRIGGER & ACTION JOB© PRICING

SMALL FRAME (COBRA, KING COBRA, VIPER):	\$200
MEDIUM FRAME (PYTHON, GRIZZLY):	\$245
LARGE FRAME (ANACONDA, KODIAK):	\$255
COMFORT CONTOUR TRIGGER STAINLESS (PYTHON, GRIZZLY):	\$ 65
COMFORT CONTOUR TRIGGER BLUE (PYTHON):	\$125
BRUSHED FINISH STAINLESS TRIGGER/HAMMER (COBRA, KING COBRA, VIPER):	\$ 55
BLUED GUN ADDITIONAL COST:	\$ 20
IF YOU SEND GUN IN AND WE TUNE IT:	ADD \$125

NOTE: IF YOU SEND THE GUN IN FOR US TO TUNE, rather than sending in just parts, you must send and receive your gun through a licensed FFL dealer. That may result in dealer charges. You will be required to use expedited shipping services that will add expense compared to shipping just parts. The additional \$125 that we charge is to cover the ATF paperwork, in house records, shop fees, and repackaging expense associated with receiving and shipping out a complete firearm. Sending a complete firearm for us to do the work will likely result in longer lead-times compared to shipping only parts.

PARTS REQUIRED

PYTHON – GRIZZLY – ANACONDA - KODIAK

COBRA – KING COBRA – VIPER

2.75 lbs Single-Action Pull, 8.75 lbs Double-Action Pull.... Just a step away!
