

Challenges: Excessive Heat and Glare

“Our client needed some heat and sun glare blocking,” shares Chad Ridgway, Owner/Operator of Infinite Distinctions. “This was achieved by installing one of Edge’s most popular products.”

Solution: Edge Ultra View 15 Window Tint

Edge provides a comprehensive range of solutions for both residential and commercial sectors through its Architectural Window Tint lineup. For this March 2025 project, Infinite Distinctions’ client selected Edge Ultra View 15 Window Tint, a premium dual-reflective tint engineered to deliver energy efficiency, heat rejection, glare reduction, fade control, protection from harmful UV rays, and exceptional daytime privacy.

Edge Ultra View 15 Window Tint is distinctive for its ability to provide privacy from the outside while allowing those inside to enjoy an unobstructed view of the outdoors. This innovative tint blocks outside views without compromising natural light, making it an ideal choice for spaces that require both privacy and visibility.

Ridgway installed 426 square feet of Edge Ultra View 15 Window Tint, which features impressive performance metrics, including: Total Solar Energy Rejected (TSER): Up to 75%; UV Reduction: Up to 99%; Glare Reduction: Up to 84%; and IR Rejection: Up to 91%.

The Result: Less Heat, More Comfort

Thanks to Edge Ultra View 15 Window Tint, Enid Public Schools’ Technology Services Center is now cooler and more comfortable, enhancing the space for both staff and students. This installation is one of several projects Ridgway has completed for the district over the years, reflecting an ongoing commitment to improving school facilities.

“It always feels good to help keep the faculty and students safe and comfortable throughout their busy days,” Ridgway says.

Infinite Distinctions Enhances Comfort at Enid Public Schools’ Technology Services Center

Enid Public Schools’ Technology Services Center in Enid, Oklahoma, faced a common challenge: excessive heat and glare caused by sunlight streaming through large windows. As temperatures rose, the building became less comfortable and more difficult to manage efficiently.

To solve this, Infinite Distinctions installed Edge Ultra View 15 Window Tint, delivering measurable improvements in heat rejection, glare control, privacy and UV protection without compromising natural light or views.
