UK Nature Markets Dialogue

Environmental Market Integrity UK

Scientific Review of Crediting Methods Workshop

Ensuring real and additional environmental improvements

Scientific methods. Independent expert review. Better outcomes for nature.

Date	Time	Location	Register
Wednesday 25 November	**10:30 AM - 12:30 PM**	**Online**	**rfj2lerd.paperform.co**

Help shape the approach to independent scientific review of methods used to quantify environmental benefits.

Workshop facilitated by Ecosystems Knowledge Network

About the environmental markets governance scheme (the Scheme)

The Scheme is being developed with funding from Defra to provide independent oversight of environmental market integrity in the UK. It aims to build confidence that environmental improvements are real and additional, make market participation easier, fairer and more cost-effective, and build on existing infrastructure, expertise and innovation.

The importance of independent Scientific Review

Market integrity requires independent review of benefit quantification and crediting methods to ensure that they are based on robust scientific evidence and provide a consistent basis for quantifying and crediting environmental improvements.

At the workshop

- **Role of quanitification and crediting methods in environmental markets**
- **Importance of independent Scientific Review**
- **Proposed criteria and process for review**
- **Next steps**

Who should attend

- People involved in the development of benefit quantification and crediting methods including codes, standards, tools and models
- People maintaining and administering existing benefit quantification and crediting methods
