with 22K gold foil.

MISSION CARDS
10 Mission cards.

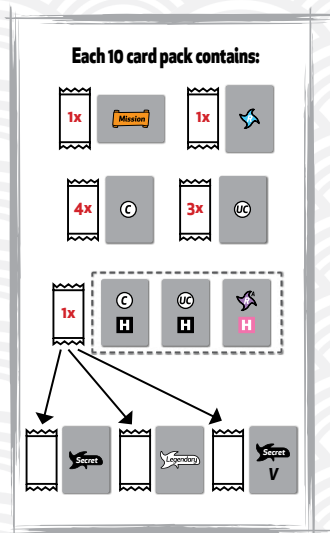

A world of challenges, emotions, and collecting

Entering the universe of NARUTO Mythos Trading Card Game Konoha Shidō means living an adventure that combines strategy, collecting, and passion. It's not only about building a winning deck, but about being transported into the beloved world of ninjas, where you can relive Naruto's adventures in an immersive way, just like in the anime itself. The collection is structured across multiple levels of power and rarity: from Common and Uncommon, also available in FullArt and Holo variants, to the Rare cards, which, when placed side by side, create spectacular images, up to the Rare ART, enriched with micro-engravings that turn them into authentic little jewels. Mysterious as ninjas, the Secret cards captivate with their sophisticated and precious design, embodying a charm that makes them among the most sought-after. The Legendary Gold 22K represents the card crafted with the most precious techniques in the entire collection: created with 22-karat gold foil, it is an extremely rare cult object and the ultimate symbol of prestige and desire for every collector. A rich and unmissable collection, in which every card is a fragment of legend.

Card numbering

The Booster Pack collection of NARUTO Mythos Trading Card Game Konoha Shidō consists of 151 cards, divided into different rarity categories and types that enrich both gameplay and collecting. The cards are subdivided as follows:

- ✦ **Common (55) + Uncommon (48):** 1/130 → 103/130.
Available in Normal, FullArt, and Holographic variants. Each booster pack contains 4 C, 3 UC and 1 Holographic card among C, UC or Rare ART.
- ✦ **Rare (27):** 104/130 → 130/130. Holographic cards that are powerful and visually appealing, often combining to form a single illustration when placed side by side. You'll find one in every pack.
- ✦ **Rare ART (27):** Variants of the Rare cards feature micro-engravings. They share the same numbering as their corresponding Rare cards but with an "A" suffix after the fraction (e.g., 104/130 A). Each booster pack contains either 1 R Art, or 1 C Holo, or 1 UC Holo.
- ✦ **Secret (10+4):** Numbered beyond the main collection, 131/130 → 140/130. There are 4 ultra-rare Numbered Secret Variants, limited to individually numbered copies each.
- ✦ **Mission (10):** Widescreen-oriented cards with their own independent progressive numbering (1, 2, 3...10). You'll find one in every pack, available in both standard and holographic versions.
- ✦ **Legendary (2):** limited-edition card, numbered like a work of art n/x000 (e.g., 1/1000 ... 1000/1000).

There are also cards outside the main collection, available inside special packs, blisters, official events, and organized play tournaments. These special cards are called Mythos and are divided into two categories:

- ✦ **Mythos Exclusive Unreleased:** completely new cards that continue the progressive numbering starting from 141/130.
- ✦ **Mythos variant:** variants of cards already belonging to the main collection, which retain the numbering of their previous card.

Common and Uncommon

The Common and Uncommon cards form the foundation of the NARUTO Mythos TCG collection. Each card of these types is available in three versions: standard, fullart, and holographic. The FullArt version highlights the complete artwork for a more immersive and collectible visual experience, while the holographic version adds dynamic diagonal rainbow effects, offering players a refined and striking aesthetic option.

NORMAL VERSION

FULLART VERSION

HOLOGRAPHIC VERSION

C
COMMON

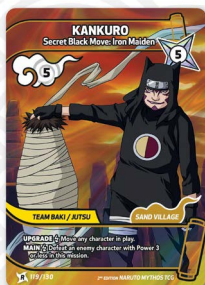

UC
UNCOMMON

The Common cards feature the most iconic characters and actions, essential for understanding the rules and building the first decks, while the Uncommon cards introduce more refined variations, with effects and combinations that enrich strategy and diversify gameplay. Together, they represent the heart of the collection: accessible, versatile, and always rewarding to find, perfect both for those who are new to the game and for those who aim to complete their collection with every holographic version.

Rare

RARE

The Rare Cards take the NARUTO Mythos TCG collection to a higher level, standing out for their rainbow holographic effect combined with a 3D finish that enhances graphic details, where the image dominates in all its expressive power. The Rares are powerful cards, yet more difficult to obtain, designed to embody value and rarity, and are essential for building a winning deck. They are created in compositions that, once collected and placed side by side, form continuous and evocative scenes, turning the binder into a visually rich and captivating journey with every new card added. These cards unite the charm of gameplay with the joy of collecting, offering players the thrill of preserving images that grow and reveal themselves page after page.

Rare ART

The Rare ART cards are a special variant of the Rare cards, designed to enhance the character's identity to the fullest and transform them into authentic collectible portraits.

Two details make them unmistakable: the holographic effect, which gives brilliance and depth, and the micro-engraving, which sculpts the surface with refined textures and raised details perceptible to the touch. They also feature the letter "A" placed next to the numbering at the bottom.

Thanks to this combination, each Rare ART becomes a distinctive and prestigious piece, capable of enriching any binder with a touch of elegance and uniqueness.

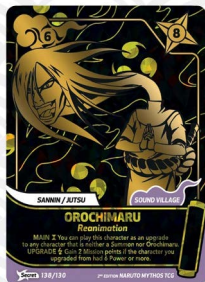

RARE ART

Secret

The ten Secret cards embody the highest expression of rarity: prestigious cards that combine an abstract triangle holographic effect with a special exclusive golden finish. This unique treatment gives them an unique brilliance, with reflections that enhance every detail of the illustration, making them instantly recognizable.

Their limited print run and low pull rate turn them into true collector's jewels, symbols of prestige and absolute rarity. Owning one means adding to your deck an iconic piece, capable of capturing attention and standing out for its power, allure, and exclusivity. 4 Secret cards also exist in a Variant version, produced in only 840 individually numbered copies. Featuring vivid color accents and a premium serigraphic embossed texture, these variants add depth, brilliance, and a refined tactile feel. Variant Secret Cards represent the peak of collectability: a rare treasures made to impress and complete any true collection.

 SECRET

Mythos

Mythos cards are cards out of collection and cannot be purchased individually. They are available only through special products such as Starter Packs, Team Sets, or Team Boxes. These cards are distributed during exclusive events such as fairs, previews, or official initiatives and also through Organized Play, accessible by registering on the TopDeck platform and participating in tournaments held in authorized stores. During these occasions, players can obtain or win Mythos cards created exclusively for those events.

They share with the Rare ART cards the same visual and prestigious effects: independent illustrations, enriched with a refined holographic effect and elegant micro-engravings. Mythos cards can be completely new or reinterpret iconic cards from the main collection, dedicated to emblematic characters or legendary scenes, always featuring unique artwork and finishes. Each Mythos card is produced with exclusive artwork created specifically for this rarity.

Mission

Mission MISSION

Mission Cards represent the narrative and strategic core of every match. Each one recalls the famous ninja missions and is played in progressive order: the first is rank D, followed by C, B, and finally A. From an aesthetic standpoint, Mission Cards stand out for their premium gold finish, with rainbow reflections applied along the edges and character outlines, creating elegant light effects within the image. The surface is enhanced with special varnishes that produce a 3D effect, highlighting details and the depth of the scene. From a collector's perspective, they are distinguished by their evocative design, capable of immersing the player in the atmosphere of the anime, retelling the most iconic moments of the story.

Mission Cards have a unique value: they are essential for playing and for completing the TCG experience, as they directly influence deck-building and the selection of the cards best suited to each player's strategy.

Legendary

The Legendary Gold represents the card crafted with the most precious techniques in the entire collection: 2 exclusive and unrepeatable cards, created with 22 karat gold foil and enhanced by precision micro-engravings that accentuate their reflections and depth.

Produced in two strictly limited editions, each card stands as a true collector's masterpiece, combining luxury, rarity, and technical craftsmanship. Rock Lee is issued in a limited run of 2000 copies, while Sasuke is even rarer, with only 1500 copies produced. Each card is individually numbered within its own edition, further enhancing its exclusivity.

Unlike all other cards, they do not belong to the standard set numbering, but assert themselves as symbols of excellence and prestige, destined for only a few fortunate collectors.

More than just cards, the Legendary Gold pieces are absolute icons of the NARUTO Mythos TCG, treasures of gold and light, capable of transforming any collection into a unique and unparalleled relic.

Legendary LEGENDARY
