

Introducing MealViewer!

Your School Menus — Now Easier to Access Than Ever

What is MealViewer?

We're excited to announce the launch of MealViewer, our new online tool that lets you easily view what's being served in your school's cafeteria — anytime, anywhere!

What You Can Do with MealViewer

- See daily menus — the most current and accurate options available
- Check allergens and nutrition information for every item
- View real-time updates — the site refreshes every 15 minutes
- Print menus weekly or monthly – menus are visible 30 days in advance.

Helpful Tips for Using MealViewer

- When searching for your school, do not include a period after “St” (Example: type “St ____” instead of “St. ____”)
- Please note: Menus dated before November 3rd may not display correctly due to technical setup issues during launch.
- For the most accurate information, view menus from November 3rd and beyond.

Accessing MealViewer

- You can download the MealViewer To Go app or view it on your desktop/mobile — whichever is most convenient.
- You can search for your school each website visit or use your school's specific MealViewer link.
- You do not have to create an account to view menus.
- However, if you choose to create one, MealViewer will save your school selection and any student dietary preferences for quicker access in the future.
