

# Tree Growth Regulator

## WHAT:

A chemistry (Paclobutrazol) utilized to re-orient, or manipulate, tree hormones.

## WHERE:

Applied in many scenarios whether it be large-scale HOA plantings, construction preparation, homeowners, apartments, commercial property owners etc. This mixture is either soil-injected, or hand-applied in a trench at the base of a trees trunk.

## SYMPTOMS:

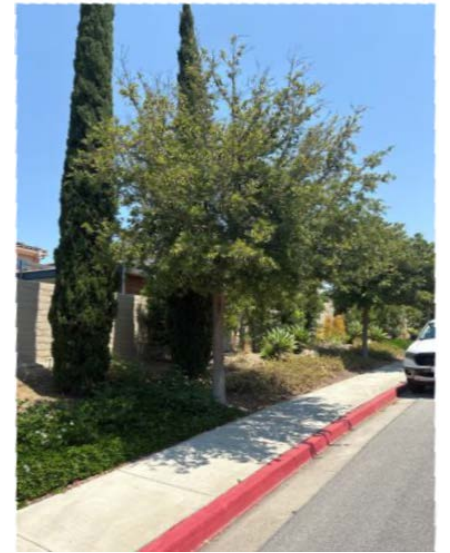

Yellowing leaves, dieback in tree canopy, construction preparation, root pruning preparation, building encroachment, health remediation, and pruning minimization are all symptoms/scenarios where this tool is extremely useful.

## HOW:

Consult with one of our Urban Forestry Experts to identify whether or not this tool will be useful for the trees on your property, and why.

*Quercus virginiana* was down for removal, this is a before photo

*Quercus virginiana* recovered over the winter with a Tree Growth Regulator application. This is an after photo, and it was taken off of the removal list
