

ADD/ADHD Monitoring Requirements

The providers of Western Wake Pediatrics are committed to providing the best possible care for our patients who require ADD/ADHD medication. To ensure we maintain this high standard of care, we have implemented a standardized schedule of medication monitoring for our patients.

1. At the time of the initial evaluation, if medication is prescribed the patient must be seen within the first 30 days of medication to be able to receive any refills. It is the responsibility of the parent or guardian to make the follow-up appointment with their provider.
2. At the time of the second visit, medication refills will be provided. To ensure the best response to medication it is necessary for the patient to be evaluated 3-4 months after the initial evaluation and again 3-4 months later. It is the responsibility of the parent or guardian to make the follow-up appointments with their provider.
3. These criteria must be met for us to be able to continue managing your child's medication beyond the evaluation period listed above.
4. If the child stops the ADD/ADHD medication for a period of more than 120 days (4 months), this schedule of visits must be repeated for continued medication monitoring.
5. **ADD/ADHD medications are not considered emergency medications. Please allow up to five (5) days for us to complete your prescription requests. Prescription requests will not be handled over the weekend or on holidays. There will be a $20 service charge for same day requests.**

I have read and understand the above criteria. I understand that for the providers of Western Wake Pediatrics to be able to manage my child's ADD/ADHD medications I will have to adhere to the above schedule of visits. If the above schedule is not followed, medication management will be terminated until the process can be re-started.
