WESTERN WAKE
PEDIATRICS

Administering Injections Prescribed by Specialists

Established patients of Western Wake Pediatrics may schedule a Nurse Visit to have injections prescribed by Specialists administered in our office if they have received an initial dose at the Specialist office or inpatient hospital setting, are up to date with their annual/preventive check-up, and meet the following criteria:

- Verification must be provided to WWP that a dose has been previously administered at the Specialist's clinic and that the patient did not have a reaction to the medication.

- The patient is responsible for bringing the medication with them to WWP and must have the prescribing information on the medication as dispensed by a pharmacy. The patient should also bring the package insert included with the medication.

- The patient is responsible for delivering the medication in the proper storage requirement, i.e., refrigerated/frozen vs. room temperature.

- If stated in the package insert, the patient will be observed after the injection for the appropriate amount of time.

Medication administration will be documented in the patient chart.
