

CASE STUDY

Bin Stores

BACKGROUND

We were contacted by a potential client who wanted to replace some existing timber doors on two bin stores at a block of flats in High Wycombe. Our doors are a perfect solution for this type of requirement. Having visited the site to undertake the survey and understand the exact requirements with the client we realised their main issue wasn't keeping people out...

THE CHALLENGE

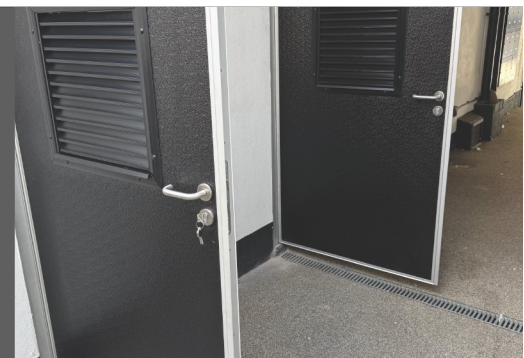

The main issue for the client was to stop vermin from entering the bin stores. The old wooden gates had a gap at the bottom making it easy for vermin to enter. The other challenge was an uneven floor, making installing a door to completely fill the gap, whilst still making it easy for the bin men to collect the bins, an issue.

THE SOLUTION

- Two single PA1 Aluminium doors fitted, including a top louvre with an insect mesh. This allowed for ventilation for the bin store, whilst keeping the door secure from attacks by vermin or people.
- Threshold built up and pointed to overcome significant slope and prevent the doors scraping on the floor.
- Locks would be included to give the client an option to secure the bin stores if required. Doors included black GRP finish on the outside with bare aluminium on the interior, keeping costs lower.

THE RESULTS

The doors have now been fitted and are now preventing vermin from entering the bin stores. It also means the bin stores are more aesthetically pleasing whilst also keeping them more secure. By listening to the clients difficulties, we were able to design a bespoke solution that solved their problems as well as giving them additional benefits.

WHAT THE CLIENT SAID

"Over the years we have had a number of issues with our bin stores, specifically with vermin. The original solution was a traditional slatted wooden gate. We asked TS Designs if they had an alternative and the result has been incredible. Not only have the vermin been kept out but we are also able to secure the bin cupboards to prevent unauthorised people having access as well. The service provided by TS Designs was excellent from start to finish."
