

## Why you should be using our **MS365 Procurement & Tenant Configuration service..**

***It's All About Security!*** - *Cyber threats are constant, and staying ahead of attackers requires more than just having Microsoft 365. It requires configuring it correctly, adding critical protection layers, and actively monitoring it 24/7.*

**Our MS365 Procurement & Tenant Configuration (MSPTC) starts with normal Microsoft 365 licenses, which includes (but not limited to):**

- Microsoft 365 Apps: Word/Excel/Outlook/PowerPoint (web or desktop versions, depending on level)
- Exchange Online (50GB mailbox + unlimited archive)
- SharePoint & OneDrive for secure file storage and sharing
- Microsoft Teams for collaboration
- Azure Information Protection (data classification & email encryption)
- Intune for device and application management (Business Premium only)

It's a strong foundation — but licensing alone does not equal security. Without proper setup and monitoring, you're not fully protected. That's where our MSPTC solution makes the difference.

### **What We Add**

#### **Cloud Backups**

Your Microsoft 365 data is not backed up the way most business owners assume. We implement secure cloud backups for email, OneDrive and SharePoint and retain them according to your data policies — protecting you from accidental deletion, ransomware, or data loss.

#### **Identity Threat Detection & Response (ITDR)**

Identity attacks are one of today's biggest risks. We protect against:

- Unauthorized logins
- Credential theft
- Session hijacking
- Malicious inbox rules
- Impossible Travel (logging in from two locations)
- MFA fatigue
- Unauthorized privilege elevation
- Token theft

If suspicious activity occurs, accounts are locked down immediately and we respond fast — often before you even know there's a problem.

#### **Microsoft Defender for Office 365 P1**

Included in our MSPTC solution, this advanced Microsoft security layer protects email, files, and collaboration tools from sophisticated, real-time threats. We configure it properly to work seamlessly for maximum protection.

#### **24/7 Monitoring & Rapid Response**

Security doesn't stop after setup. We continuously monitor your environment day and night. If a threat appears — even after hours — our systems alert us and automatically secures compromised accounts. If manual remediation is needed after that, we'll contact you for the solution plan (manual labor coverage depends on agreement plan level).

#### **A True Business-Grade Security Solution**

Our MS365 P&TC solution turns your normal MS365 tenant into a fully secured and monitored environment.

*You run your business.  
We protect it.*
