Welcome

It is with great pleasure that we welcome you to our 4th on-property sale at *Retallack*, Arian Park, once again presenting genetics from both Bauer and Retallack Border Leicester Studs. It is hard to believe sale time has come around again. Like many, we experienced the challenges of a late seasonal break in 2025, but things are looking more positive and we remain hopeful for further rain to finish the season well.

We are proud to present a quality lineup of 120 rams for sale, displaying consistency right throughout the catalogue. Our aim has always been to offer the best quality Border Leicester rams available producing structurally correct, ready-to-work rams, and we are confident this year's draft will not disappoint.

Our focus remains firmly on producing top-performing rams that deliver real results for commercial breeders, and we measure our success by the success of our clients. It is incredibly rewarding to see our genetics working so effectively in their programs, consistently lifting the quality and marketability of their flocks. Once again, our clients have featured right at the top of the 1st X Ewe sales, including strong results at both West Wyalong and Narrandera. These outcomes are a clear reflection of the performance and consistency built into our breeding program, proving that the strength of our genetics translates directly into success in the marketplace.

Both Bauer and Retallack genetics are strongly represented in this year's sale, and we are proud of the quality draft we have on offer. The rams display an impressive level of evenness, structural soundness, and breed type, reflecting the depth of our breeding program. To give buyers added confidence, comprehensive performance data is available, with every ram Stockscan measured and micron tested. This information underpins the consistency and reliability of our genetics, ensuring they can make a lasting contribution to any breeding program.

All sheep offered are Brucellosis Accredited (76472), Approved Vaccinates, and have been vaccinated annually for the 22nd consecutive year. The only sheep run on the property are our two studs.

As always, complimentary delivery is available (numbers permitting). We thank you for your interest in our genetics and for your ongoing support of Bauer and Retallack Border Leicester Studs.

Kind regards

Buerckner Family

Please note: Sheep from Retallack origin start their tag numbers with 1000.

Scanning for performance traits in animals has become a significant on-farm measuring tool for many years.

Australian Stockscan Services P/L scanners assess sheep at around 8-12 months of age for:

- Live Weight (LW)
- Eye Muscle Width (A)
- Eye Muscle Depth (B)
- Fat Depth (C)
- Eye Muscle Area (EMA) is calculated using the eye muscle width (A) and depth (B) measurements ($A \times B$).
- Eye Muscle Area (EMA) to Live Weight (LW) ratio calculated.
- Meat Index Live Weight measurement.

The meat index formula is based on the eye muscle width (A), eye muscle depth (B) and fat (C) measurements. A higher predominance is given to eye muscle width (A) because it is more heritable while eye muscle depth (B) is influenced by environment factors. Fat (C) is penalised slightly. The resulting number is then adjusted for the age of the sheep, so the index is what the sheep's index would have been at eight months of age.

The data in the catalogue is designed to make it easier for you when selecting rams for particular traits. Simply, the figures are displayed as being either above or below the average for our flock.

Traits recorded are:

- Birth type (single, twin, triplet or quad)
- Weaning weight
- 200 day of age weight
- 12 month weight (recorded at muscle scanning)
- Eye-muscle depth
- Eye Muscle area
- Fat Depth
- Micron
- Fleece weight

Listed below are the 2024 drop averages for each trait for both Selected and Flock Rams.

Selected Ram Averages
