

EMERGENCY POWER SHUT-OFF

Switch Located Here - Open Door

How to turn off the main breaker switch.

**ON-OFF
SWITCH**

After you have opened the Service panel or Breaker Box door, you will see rows of circuit breakers. Each breaker has it's own switch or toggle switch. The main breaker for the home is on the top (sometimes located on the bottom) To shut one off, flip the lever to the "off" position. This should shut off the power to the entire home. You might want to bring a flashlight with you so you can see after turning off the power.

**ON-OFF
SWITCH**

You can use one of the small signs to the left and tape it next to the main breaker switch so it's more obvious which switch is the main breaker.
