

How Our Pricing Works

Concrete is a major investment, and we want you to understand exactly what you're paying for. Our prices are based on a few key factors:

1. **Material Costs:**

We use top-quality concrete mixes from trusted suppliers. Material prices can fluctuate based on cement, stone, and delivery costs — we always price using current market rates.

2. **Project Size & Scope:**

The total square footage, thickness, and complexity of the job affect pricing. Larger or more detailed projects require more material, equipment, and crew time.

3. **Site Preparation:**

Every site is different. Grading, removal of old concrete, or tight access areas can change the amount of prep work needed.

4. **Labor & Equipment:**

Our team includes experienced professionals, proper insurance, and the right tools for the job. You're not just paying for concrete — you're paying for skill, safety, and reliability.

5. **Peace of Mind Guarantee:**

Concrete naturally cracks over time, but if any cracks appear in the first 3 months, we'll repair them at **no cost**.

Minimum Project Cost:

Because every job requires setup, cleanup, and crew coordination, our **minimum project cost is \$2,500**. This ensures we can deliver the same level of quality, attention, and professionalism on every project, big or small.

We may not always be the lowest price — but we deliver **real value**, built on quality materials, craftsmanship, and service you can trust.
