## Spin-On Filters

### Applications for Spin-On Filters

- Mobile Equipment
- Hydrostatic Drives
- Industrial Power Units
- Reservoir Breathers

Often, economic conditions dictate what type of filter is used on a piece of equipment. When costs are tight, you need a filter that is inexpensive, yet uncompromising in performance and quality. Parker's spin-on filters fit that need. They are built to fit demanding design parameters in today's mobile and industrial equipment. No compromising.

**Mounting**

- 2 or 6 hole pattern for flexibility

**Indicator Gauge**

- Shows at a glance when the canister needs changing

**Ports**

- Both NPT and SAE straight thread available

**Disposable Canister**

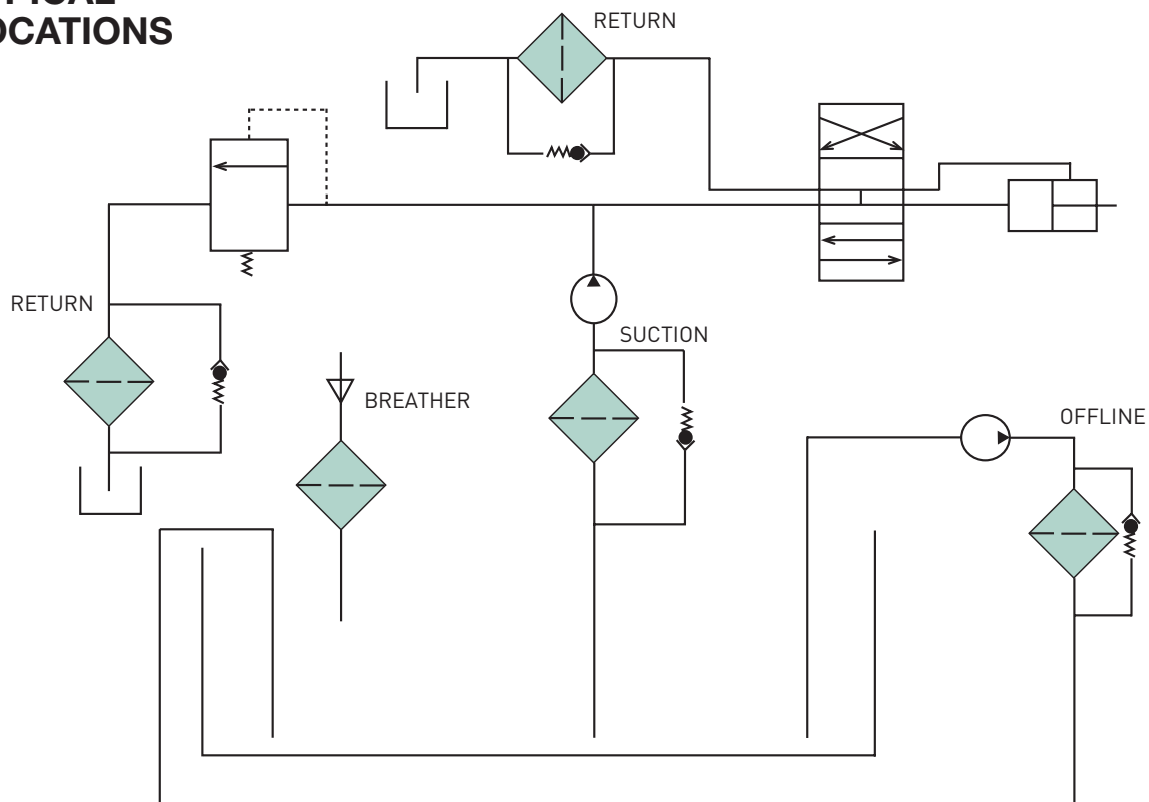

- No mess, oil is contained inside
- Easy to handle
- Single and double lengths for longer life

**Interchangeability**

- Parker canisters fit many competitors' heads. Contact Hydraulic Filter Division for part numbers

### Reservoir Breather Assemblies 12AT and 50AT

#### Sizing

Select the proper size canister for the maximum rate of reservoir draw down or air exchange rate. As a rule of thumb, clean pressure drop should be limited to 0.18 psid (5" H<sub>2</sub>O).

A pipe flange, weld collar, etc. may be used to connect the adapter kit to the reservoir. Make sure that air is not able to leak around the adapter. When mounting on the side of the reservoir, make sure the installation is above the surface of the fluid.

Recommended canister change out is after 500 hours of operation. More frequent replacement may be required when operated in heavily contaminated areas such as grinding operations, primary metal mills, and on mobile equipment. Under such conditions, increase replacement frequency to every 250 hours.

Model	Air Rating*	Canister	Adapter Kit
12AT-03C	1 micron	926543	926876
12AT-10C	2 micron	921999	926876
12AT-25C	5 micron	925023	926876
50AT-03C	1 micron	926541	926875
50AT-10C	2 micron	926169	926875
50AT-25C	5 micron	926170	926875

\* 99% Removal efficiency for particles larger than the stated size in air.

Graphs are for 03C canisters only. Total pressure drop across canister, adapter, and pipe may be found by adding pressure drops below:

- + 1.5% for each inch of 12AT adapter or 3/4" pipe used.
- + 3.0% for each 3/4" elbow used.
- + 1.0% for each inch of 50AT adapter or 1-1/4" pipe used.
- + 2.0% for each 1-1/4" elbow used.

**TYPICAL INSTALLATIONS  
MOUNTED ON TOP  
OR SIDE OF RESERVOIR**

Allow 1.25" for canister removal clearance

### Filter Service

Filter canisters need to be replaced when the pressure gauge reads the filter bypass setting. For example, if a 12AT filter has a 25 psi bypass valve, it needs to be replaced when the pressure gauge reads 25 psi. If no indicator of any kind is used, replace the canister after the first 50 hours of operation, and every 250 hours thereafter. More frequent replacement could be required depending on operating conditions.

When servicing a 12AT or 50AT filter, use the following procedure:

- Shut down the main system and release pressure in the filter line.
- Unthread the canister and discard it along with the accompanying seal. A strap wrench may be required.
- Apply a small amount of lubricant to the new canister seal.
- Install the new canister and hand tighten 3/8 to 1/2 turn after gasket makes contact with head.
