

# BIOLOXX™ NATURAL SPILL ABSORBENT

Color my World!  
Works Great in Attacking Paint Issues  
ALL ABOUT PAINT

# THE PROBLEM

## Paint

Spills happen, and there are no controls as to when, where, what. Let's look at paint...whether it is old paint spilled containing, latex, oil based or any other combination mix. Use BioLoxx Natural Spill Absorbent

What do you do with old paint; just toss some BioLoxx into the can and see how fast it works. This can had about 4" of old rust flaked unusable paint

BioLoxx was dumped into the can, the lid was put back on shook it around and it was immediately absorbed

# THE PROBLEM

Paint

Then a paint stick was used to further mix BioLoxx inside the can to make sure everything was absorbed into the product

You can see that BioLoxx was taking it all in and not leaving any residue. BioLoxx and the paint formed round clusters during the absorbing process

# THE RESULTS

This shows that BioLoxx took care of everything and even cleaned up the bottom and some of the sides of the old can. There was nothing wet and no wet paint signs were needed here.

Imagine what this can do when you use it on a large spill in a factory, at a store or on a jobsite.

# NOT ONLY PAINT

BioLoxx can be used on many other spill situations no matter how big or small they happen to be...

Oil Spills

Gasoline & Jet Fuel Spills

Environmental & Industrial Spills

Chemical Spills

Blood & Bodily Fluids

Toxic Spills

# BIOLOXX

Clean up and dispose of  
spills economically and  
safely.

100% Natural

Low Cost

High Absorbency
