Altiplano

- ✓ Widely adaptable Serrano pepper with a vigorous plant and main season maturity.
- ✓ Jumbo size fruit averaging 5-5.1 inches in length.
- ✓ Uniform, glossy green color.
- ✓ Quickly becoming a market leader due to its excellent fruit quality and high yield potential.

Super Max

- ✓ Outstanding Monoecious Pickling Cucumber with high yield potential and resistance to PRSV, WMV, ZYMV & CMV. High quality fruit are uniform in shape with small seed cavity, dark green color and crisp texture.
- ✓ This variety has a very vigorous plant which matures 40 to 45 days to first pick. It is ideal for fresh market and well suited where pickles are sold for processing.

*Sowing your Future*

# Committed to Development, Dedicated to Quality.

Super Surprise

Rispens Exclusive

Super Surprise (BC/ 74d) is a versatile bicolor hybrid. Good seedling vigor, paired with a great husk package and strong yields make Super Surprise an excellent choice for both local and shipping markets.

## Features

- Good pod uniformity
- Upright plant habit

## Advantages

- Excellent pod quality
- Great pod set and pod position for high yield potential

**// Grow better together at [www.vegetables.bayer.com/us/en-us/products/seminis.html](http://www.vegetables.bayer.com/us/en-us/products/seminis.html)**

Bayer is a member of Excellence Through Stewardship® (ETS). Bayer products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with Bayer's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. Commercialized products have been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.

**ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. Performance may vary**, from location to location and from year to year, as local growing, soil and environmental conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on their growing environment.

The recommendations in this material are based upon trial observations and feedback received from a limited number of growers and growing environments. These recommendations should be considered as one reference point and should not be substituted for the professional opinion of agronomists, entomologists or other relevant experts evaluating specific conditions.

**Roundup Ready® Technology** contains genes that confer tolerance to glyphosate. **Glyphosate** will kill crops that are not tolerant to glyphosate. Roundup Ready® and Seminis® are registered trademarks of Bayer Group. ©2023 Bayer Group. All rights reserved.

future

Topma RZ

Estrema RZ

Swingma RZ

## Topma RZ

- Heavy box type cabbage
- Very dense and heavy head
- Improved Bronco type
- Great field holding and stress tolerant
- Highly resistant to FOC:1

## Estrema RZ

- Vigorous savoy to semi-savoy type with a flat to round head shape
- Reliable performance under different growing conditions
- Highly resistant to FOC:1

## Swingma RZ

- Blue green hybrid cabbage
- Short core, perfect round shape and a juicy mild flavor
- Has strong vigour, healthy wrapper foliage and FOC:1 resistance
- Weight range: 1.5 to 4.2kg, 70 to 85 growing days

## Please Read Before Ordering

Conditions of Sale and Limited Warranty: Rispens Seeds, Inc., warrants that seeds sold have been labeled as required under State and Federal Seed Laws and that they conform to the label description.

No other warranty, express or implied, including without limitation any implied warranty of merchantability, performance of the crop, fitness for a particular purpose is made by the seller. In any event its liability for breach of warranty, or contract, or negligence, with respect to such seed is limited to the purchase price of the seed.

Rispens Seeds, Inc. shall in no event be liable for any consequential damages sustained by the buyer or any other person. It is expressly agreed that the sellers liability to the buyers or others for any loss (whether such loss results from the breach of warranty, or contract, or negligence) shall be limited solely to the amount of the purchase price of the seed.

These warranties and limitations of liability of Rispens Seeds, Inc. may not be altered or amended except by a written instrument signed by Rispens Seeds, Inc. By accepting the seeds, the buyer acknowledges that the above limitations and disclaimers are the conditions of the sale and constitute the entire agreement between the parties. NOTE: Any claims or problems due to defects, or any other factors resulting from the use of Rispens Seeds, Inc. seeds must be presented to Rispens Seeds, Inc. within a reasonable period after discovery (not to exceed 30 days). Seeds not accepted on the above terms and conditions may be returned to the seller in unopened containers within 10 days.

In the event of any dispute involving this seed, the following shall apply: Rules of the American Arbitration Association.

Definitions of descriptive terms used in this catalog are listed on page 57.

All orders are subject to approval through the Beecher office.

## Terms

All seed will be shipped after payment has been received, either with order or prior to delivery, unless credit has been established. A **\$15.00 handling charge will be added to customer orders when the order total is less than \$150.00.**

**APPROVED CREDIT:** Credit is a valuable asset for each of us that are in business. Rispens Seeds, Inc. will extend credit only after application is received and approved. The credit line will be reviewed when payment is past due. Terms will be for cash only until future credit is re-established.

Our terms to customers with established credit (unless other terms stated) are September 1st net on seed shipped between January and July 1.

No cash discount on VISA/MasterCard/Discover/American Express orders. Please, no C.O.D.'s.

**NO ORGANIC SEED, TREATED SEED ONLY IN MOST CASES.**

**Use your credit card for mail or telephone orders before delivery only.** MasterCard, VISA, American Express or Discover accepted. Please indicate which card you wish to use and furnish complete card number and expiration date.

A finance charge of 1.5% per month will be calculated and applied to balances over 30 days past due. This is the equivalent of 18% per annum.

Seed prices are subject to change without notice.

**RETURNED MERCHANDISE:** Rispens Seeds, Inc. will not accept the return of any seeds or goods without proper authorization in writing from the shipping location. All returns are subject to a 10% restocking charge. Unauthorized returns will be refused and sent back at the customer's expense.

**FREIGHT:** All seeds shipped are F.O.B. Beecher, Illinois. We reserve the right to ship the most economical method, with normal shipments being sent either via Rispens Truck, UPS, parcel post or Motor Freight. Notice: UPS Chart with rates and zones are on page 46 at the end of the catalog.

## Hybrid Sweet Corn

### CORN DISEASE CODE:

Bm = Southern Corn Leaf Blight  
MDMV = Maize Dwarf Mosaic Virus  
Pst = Stewart's Wilt

Et = Northern Corn Leaf Blight  
Ps (Rp1-d, e, g, i, RpG) = Common Rust  
Um = Common Smut

All sweet corn seed includes a standard seed treatment + either Cruiser or Poncho insecticides. Applied directly to the seed, Cruiser and Poncho provide contact and systemic protection against Flea Beetles up to the five true-leaf stage, and are effective against plant damage and stand loss caused by Wireworms, Seed Corn Maggots, White Grubs, Southern Corn Leaf Beetles and Chinch Bugs while suppressing Black Cutworms. Cruiser and Poncho have been shown to significantly reduce the incidence of Stewart's Wilt introduced by the feeding of Flea Beetles. Independent field trials have shown that corn seed protected with Cruiser or Poncho can significantly improve final seedling stand counts.

**ATTENTION GROWERS:**

Please supply your Syngenta Seeds, Inc. Stewardship License and/or Attribute Sweet Corn Grower License number(s) prior to the purchase of any Attribute hybrids. If you do not currently hold a license, please sign up for one at [www.agcelerate.com](http://www.agcelerate.com) or return page B of this catalog to Rispens Seeds.

Please refer to yellow page letters. (See Center section of catalog.)

# Attribute® Sweet Corn

**ATTRIBUTE®** Attribute Plus and Attribute II sweet corn varieties from Syngenta provide a high level of above-ground protection against targeted pests, in addition to herbicide tolerance for increased flexibility in weed management. With Attribute sweet corn, growers have another option for harvesting outstanding yields of high-quality sweet corn that meets market needs. If properly managed, Attribute sweet corn can be a valuable addition to your crop management strategy for many years to come.

To optimize yields and ear quality, scout fields for pest outbreaks, and where necessary, apply chemical insecticides to prevent economic loss. Insect pests which are not controlled by this Bt protein include: corn rootworms, cutworms, common stalk borers, silk fly larvae, sap beetles, aphids and flea beetles. Consult your area pest management specialists or local extension agents for additional insight on pest outbreaks in your area and suggested control options.

While Attribute sweet corn is an important IPM tool that can reduce the need for chemical pest control, it is not an end-all solution. Years of IPM experience have shown that using multiple-control tactics over time is the best strategy. Under high corn-earworm pressure found in the southern half of the U.S. and with late-season planting, some pest damage can occur in Attribute sweet corn fields. If the market requires close to zero insect damage, some chemical control methods might be necessary. The number of applications and timing of these applications depend on the corn earworm pressure and environmental conditions. Continue to use conventional insecticides judiciously to control infestations of pests that are not controlled by Attribute sweet corn.

It is important to note that resistance to pyrethroid insecticides has been observed in certain populations of corn earworm, meaning insect damage is possible even with timely applications of these insecticides. Applications of insecticides with alternative active ingredients or modes of action may be required for adequate control.

Control of Key Sweet Corn Pests				
Trait Stack	European Corn Borer	Corn Earworm	Fall Armyworm	Black Cutworm

# Performance Series™ Sweet Corn

SV9012SD

SV9014SB

SV9010SA

ANTHEM II

DEVOTION II

TIGERSHARK II

**PERFORMANCE SERIES™** varieties are the only fresh market sweet corn hybrids with dual modes of action for control of above-ground insects (such as Fall Armyworm, Corn Earworm, European Corn Borer, Southwestern Corn Borer, Sugarcane Borer, Common Stalk Borer and Southern Cornstalk Borer), corn rootworm larvae protection and tolerance to **Roundup WeatherMAX®** and **Roundup PowerMAX®**. \*

**HERBICIDE INFORMATION FOR PERFORMANCE SERIES™ SWEET CORN:** Make sure the intended use is approved in your state. Do not use this information as the basis for any glyphosate product other than Roundup® brand agricultural herbicides. You must have the supplemental labeling for use on **PERFORMANCE SERIES™ SWEET CORN** containing **Roundup Ready®** technology and the product label with you when making the application.

**PERFORMANCE SERIES™ SWEET CORN IRM – POST-HARVEST REQUIREMENTS:** Crop destruction must occur no later than 30 days following harvest, but preferably within 14 days. The allowed crop destruction methods are: rotary mowing, discing, or plow-down. Crop destruction methods should destroy any surviving resistant insects.

**B.t. PRODUCTS** may not yet be registered in all states. Check with your Bayer representative for the registration status in your state.

**ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS.** Roundup Ready® crops contain genes that confer tolerance to glyphosate, the active ingredient in Roundup® brand agricultural herbicides. Roundup® brand agricultural herbicides will kill crops that are not tolerant to glyphosate.

\* The B.t. proteins utilized by PERFORMANCE SERIES™ sweet corn hybrids should not be considered as 100% fail-safe measures against insect infestation or damage, but rather as an additional pest management tool to supplement insecticide applications and other Integrated Pest Management strategies when needed. Proper scouting and monitoring of target insect pests is advised as insect damage is possible under certain environmental conditions. PERFORMANCE SERIES™, Roundup Ready®, Roundup PowerMAX® and WeatherMAX® (and if applicable, Transorb®) are trademarks of Bayer Group and used under license. It is important to note that resistance to pyrethroid insecticides has been observed in certain populations of corn earworm, meaning insect damage is possible even with timely applications of these insecticides. Applications of insecticides with alternative active ingredients or modes of action may be required for adequate control.

## TO OUR GROWERS:

Please be aware that a valid Bayer Technology/Stewardship license is required prior to the purchase of this sweet corn seed. To obtain a license, please go to [www.agcelerate.com](http://www.agcelerate.com) or contact Rispens Seeds for a form.

# High Eating Quality Supersweet (Sh<sub>2</sub>)

New and innovative Sweet Corn with the best eating quality available today. These are Sh<sub>2</sub> varieties that have the sweetness, flavor and holding ability of standard Sh<sub>2</sub> sweet corn, but with the tenderness generally associated with SE types. THIS IS TRULY GOURMET QUALITY CORN. These need to be isolated from other endosperm types.

### CUCUMBER DISEASE CODE:

Psl = Angular Leaf Spot  
Cca = Target Spot  
Ccu = Scab  
Co = Anthracnose  
CMV = Cucumber Mosaic Virus

Pcu = Downy Mildew  
PRSV = Papaya Ringspot Virus  
Px = Powdery Mildew  
WMV = Watermelon Mosaic Virus  
ZYMV = Zucchini Yellows Mosaic Virus

### OTHER CUCUMBER TERMS:

GY = (Gynocious) refers to all female sex expression when grown under ideal environmental conditions. Various stresses can cause more male flowers.

MO = (Monoecious) refers to sex expression; having both male and female flowers on the same plant.  
P = (Parthenocarpic) refers to the tendency of a plant to set fruit without pollination.

**FM** = FarMore F1400 treated  
(See page 38 for details)

**FarMore F300**, an advanced fungicide seed treatment technology, delivers protection for a variety of small-seeded vegetable crops against a broad spectrum of seed and seedling diseases. With the active ingredients mefenoxam (Apron XL®), fludioxonil (Maxim® 4FS) and azoxystrobin (Dynasty®), FarMore F300 enhances seedling emergence, plant stand establishment, plant health, early-season vigor and yield potential.

**FarMore FI400** fungicide/insecticide seed treatment technology helps maximize cucurbit and leafy vegetable production by enhancing performance and value. FarMore FI400 contains the fungicides found in FarMore F300 with the addition of thiamethoxam insecticide. This powerful fungicide/insecticide combination protects cucurbits and leafy vegetables against a broad spectrum of early-season diseases and insects.

### SPECIAL NOTICE for TRIPLOID WATERMELON

Hybrid triploid watermelons are characterized by producing fruit with few or no true seeds. Hybrid triploids have been referred to as "Seedless Watermelons" because of the relative lack of true or hard seeds in the fruit. Even though the term "Seedless" is commonly used to describe hybrid triploid watermelon, it has been established that the development of immature white empty seed coats or hard dark seed can and will occur in hybrid triploid watermelon fruit under certain genetic, cultural and/or environmental conditions.

RISPENS SEEDS, INC. strongly recommends that growers contact local university extension experts for cultural and variety information related to the use of hybrid triploid watermelon. Growers are also encouraged to develop production expertise with hybrid triploid watermelon prior to making recommendations or planting large scale commercial acreages of hybrid triploid watermelon.

### SPECIAL LIMITATIONS of WARRANTY for TRIPLOID WATERMELON

All hybrid triploid watermelon seeds are sold pursuant to RISPENS SEEDS, INC. standard terms and conditions of sale. Descriptions and illustrations in the catalog and elsewhere of specific hybrid triploid watermelon varieties are representative of hybrid triploid watermelon grown under favorable conditions and favorable geographic locations. Appearance and performance may vary in other geographical locations and under different growing conditions.

RISPENS SEEDS, INC. expressly excludes any warranty of conformity to description, illustration or sample and extends no warranty that hybrid triploid watermelon seed sold will produce - 'seedless' fruit. All implied warranties, including but not limited to any implied warranties of merchantability or fitness for a particular purpose are expressly excluded.

## TRIPLOID POLLINATORS

These varieties are designed to eliminate the need to plant traditional seeded (diploid) watermelon varieties in seedless (triploid) watermelon fields. Vines and fruit of these pollinizers are designed not to compete with the seedless plants in order to maximize the yield of seedless varieties.

912501	BENARY'S GIANT MIX	\$25.00	\$37.00	\$34.00

Large blooms up to 6" in diameter. Colors include deep red, orange, carmine rose, coral, lime, wine, purple, bright pink, white, salmon rose, scarlet, and golden yellow. Blooms in about 75 days.

Benary's Giant Mix

Valentine

Soraya

## DEFINITIONS OF DESCRIPTIVE TERMS IN THIS SEED CATALOG

The seed varieties listed in this Rispens Seeds, Inc. catalog are variously defined as being “resistant,” “intermediately resistant” or “susceptible” to disease. These terms describe the reaction of a plant to a particular disease. Please note that some disease organisms have the ability to change from one year to the next, and may vary their intensity of attack. The aggressiveness of strains of the pathogen to which the plant is subjected will influence the disease reaction. The amount of the pathogen present can also influence the resistance or intermediate resistance of a variety. Environmental conditions are extremely important in disease development. Adverse environmental conditions may allow the pathogen to overcome the resistance or intermediate resistance which is bred into a variety. Finally, new races or strains of the pathogen, or a new pathogen, may occur. Statements in this catalog regarding disease resistance or intermediate resistance are based primarily upon reports by seed producers and experimental research stations. It is important for a grower to understand his particular needs before choosing a variety. **As shown in this catalog, pathogens listed under the “disease” or “features” column(s) are considered resistant unless otherwise labeled “IR” or intermediate resistant.**

**Definition of these terms is as follows:**

**DISEASE:** A condition in which the structure or use of the plant is harmfully affected, due to fungi, bacteria, viruses, nematodes or an adverse environmental condition.

**ENVIRONMENTAL STRESS:** Adverse environmental conditions such as extreme heat or cold, excess water or drought, or excessive wind that can produce reactions in plants that may render the plant/product unmarketable. Rispens Seeds, Inc. does not assume any responsibility for the quality of vegetable production grown under environmental stress conditions.

**VARIETAL DESCRIPTIONS:** Varietal descriptions within this catalog have been prepared as a guideline only. It is given for comparison purposes to help growers plan crop planting programs, and can be expected to vary in some degree depending upon geographic location, soil type, climactic conditions, and cultural practices. The information on relative maturity (expressed as “days” or “\*days” – days from transplant) in this catalog is given only as a guide, as the actual maturity will vary considerably with conditions.

**VARIETAL ILLUSTRATIONS:** Varieties illustrated in this catalog are the result of favorable growing conditions and identical results are not guaranteed. Color illustrations may not be 100% accurate.

**TREATED SEED:** Certain seed listed for sale in this catalog is treated for protection against seed borne and soil borne disease(s). One or more of the following types of chemical treatments may be utilized: bactericide(s), fungicide(s), and/or viricide(s). In addition, hot water treatment may be employed.

### Terminology for Defining the Reaction of a Plant Variety to Pest and Pathogen Attack

**IMMUNITY:** Plant varieties which are not subject to attack or infection by a specific pest/pathogen are considered immune.

**RESISTANCE:** Not as strong as immunity; two levels of resistance are defined.

**RESISTANCE (R):** Includes plant varieties that restrict the growth and development of the specific pest or pathogen under normal pest or pathogen attack pressure when compared to susceptible varieties. These plant varieties can exhibit some symptoms or damage under heavy pest or pathogen pressure. Plant varieties with Resistance (R) are not immune to the pest/pathogen.

**INTERMEDIATE RESISTANCE (IR):** Includes varieties that restrict the growth and development of the specified pest/pathogen, but may exhibit a greater range of symptoms or damage compared to resistant varieties. Intermediate resistant plant varieties will usually show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest/pathogen pressure, but may have heavy damage under heavy pressure. Plant varieties with Intermediate Resistance (IR) are not immune to the pest/pathogen.

**SUSCEPTIBLE:** Defined as the inability of a plant variety to restrict the growth and development of a specified pest/pathogen. Plant varieties that are susceptible will show damage when infected and are more likely to have heavy damage under moderate levels of pest/pathogen pressure.

### Terminology to Describe the Reaction of a Plant to ABIOTIC Stresses

**Abiotic stresses are those caused by the environment and not by a living organism.**

**TOLERANCE:** The ability of a plant variety to endure abiotic or environmental stress with more limited effect on growth, appearance and yield although, under higher levels of abiotic stress, the plant variety may be damaged.

**FM**

**FarMore Seed Treatment**

**Rispen Seeds Exclusive**

**Premium Treatment**

See [www.ups.com](http://www.ups.com) for other destination and service options.

You can determine **your** shipping cost by finding **your** UPS zone in the Zone Chart – the first three digits in your zip code will determine this. Next, determine the weight total of order. Then find order weight on the Ground Service Chart and the appropriate zone column which shows cost of shipping.\* **Any fraction of a pound over the weight shown, takes the next higher rate.**

Example: If your zone is 4 and the weight of the order is 40 lbs., your cost would be \$29.14.

\* (Prices subject to change by UPS)

**Please, no C.O.D.s.**

### ADDITIONAL CHARGES:

For each Address Correction – \$12.35

Declared Value for Carriage:

A package is automatically protected against loss or damage up to \$100.00 without a declaration of value.

For a declared value of \$100.01 and over the charge is \$0.90 for each \$100.00 (or portion of \$100.00) of the total value declared with a minimum charge of \$2.70.

For each Delivery Confirmation Response – \$2.00

Signature Required – \$4.25

**Deliveries to Residential addresses – \$5.00**

For each Hazardous Materials ground package – \$28.50 [for those packages requiring shipping papers as outlined in Title 49, Parts 100-185 on Transportation (49 C.F.R.)]

No C.O.D.s.

### WEIGHT AND SIZE LIMITS

Maximum weight per package – 50 pounds

Maximum size per package – 165 inches in length and girth combined, with a maximum length of 108 inches per package

*Shipping costs subject to change without notice.*
