Patient Education and Engagement Programs

Quality and patient-centric healthcare are real elements of the current health and wellness climate. After all, poor healthcare is not only responsible for unnecessary illness, but it can substantially impact a hospital's or MCO's bottom line because of HEDIS measurements and star ratings.

MC-Rx has been assisting our clients with quality healthcare since 1988. Some standard features of our online adjudication system are the performance of real-time duplicate therapy determination, persistent medication monitoring and management, age-related medication monitoring, drug utilization review, and determination of adherence, which are all directly related to chronic disease management.

When it comes to true pharmacy benefit management, you can rest assured that your program is in capable and experienced hands.
