# VermiMax™

MORE THAN JUST FERTILISER

A balanced blend of natural soil nutrition and conventional fertiliser to support stronger crops and healthier soils.

Supports  
establishment

Maintains  
yield potential

Supports  
grain quality

Contributes to  
soil health

Wheat

Barley

Healthier soils  
for future seasons

VermiMax is a premium granular fertiliser combining Vermi Granule 531 with MAP to provide a balanced source of nutrients for wheat and barley, while supporting soil health.

### PRODUCT FORMULATIONS

|                                                                                   |                                                           |                                                                  |
|-----------------------------------------------------------------------------------|-----------------------------------------------------------|------------------------------------------------------------------|
|  | <b>VermiMax 70/30</b><br>70% Vermi Granule 531<br>30% MAP | Our recommended formulation for wheat and barley                 |
|  | <b>VermiMax 60/40</b><br>60% Vermi Granule 531<br>40% MAP | Higher MAP content for additional early nutrition                |
|  | <b>VermiMax 50/50</b><br>50% Vermi Granule 531<br>50% MAP | An alternative blend to suit specific soil and crop requirements |

### KEY BENEFITS

|                                                                                    |                                                                                    |                                                                                     |                                                                                      |
|------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
|  |  |  |  |
| Provides readily available nutrition for early growth                              | Supplies organic matter, carbon and naturally derived nutrients                    | Helps maintain yield potential and supports grain quality                           | Contributes to long-term soil health and soil function                               |

### WHY USE VERMIMAX?

- ✓ Reduces reliance on conventional MAP
- ✓ Combines the strengths of organic and conventional fertiliser
- ✓ Supports strong crop establishment
- ✓ Helps maintain yield potential
- ✓ May support improved grain quality, including protein (as observed in field use)
- ✓ Contributes to healthier soils for future seasons

### APPLICATION

- Designed for use at sowing
- Typical application rate: 60 – 100 kg/ha (subject to soil test and agronomic advice)
- Suitable for wheat and barley
- Can be applied in the seed row with appropriate seeding systems
- Always consider soil test results and your agronomist's advice
