cvi42 version 6.x
Upgrade Recommendations

cvi42®

Pre-Upgrade info for your cvi42 end users

1. cvi**42**|report brings a new look and feel, your report templates will need to be redone
2. cvi**42**|report end users are advised to check the cvi42Report_Changes_6.x.pdf document
3. cvi**42** receives some minor user interface updates

For more details please request a demo of the major changes between your current version and latest version of cvi**42**.

Pre-Upgrade preparation for your IT Service

In preparation for the upgrade from cvi**42** 5.14 and earlier to cvi**42** version 6.x, it is recommended to schedule a call, at least one week prior to the planned upgrade date, by contacting our Circle Customer Support (support@circlecvi.com) to ensure all information needed is available and that appropriate preparations are made.
During that call, our Support Team will discuss with you the recommended pre-update preparations which are the following:

1. Updated cvi**42** system requirements
2. Updated cvi**42** firewall and AVS exclusions
3. Updated unattended cvi**42** client deployment parameters
4. Updated cvi**42** license mechanism
5. Updated cvi**42** service names in your Windows Server service monitoring
6. Documentation of your current cvi**42** server configuration
7. Download of the cvi**42** installer

Installation/Upgrade Process Changes

IMPORTANT: Please do not attempt to upgrade cvi**42 5.14 and earlier** to cvi**42** version **6.x** without direct assistance from Circle's Customer Support Team. **A new license will be required.**
Also the upgrade process has changed and some directories will need to get shifted.
Please contact Circle's Customer Support Team (support@circlecvi.com) to discuss your detailed upgrade requirements.

The upgrade process will include the following steps:

1. Stop of all cvi**42** related Windows services
2. Full system backup, database backup
3. Log rotation and additional backups in the file system, e.g. configuration files
4. Uninstallation of the old cvi**42** version
5. Migration of data to the new standard folder structure
6. Installation of the new cvi**42** version
7. New license
8. Basic post-upgrade connectivity and functionality checks

Post-upgrade it is recommended to meet one of Circle's Clinical Application Specialists online to walk through the changes and redesign of your report templates.
