EMBEDDED MP3 PLAYER
Integrated player for reliable audio playback.

USB CHARGING
Charge connected devices.

Designed for Retail Demonstrations

The BRIQX Multi Cast is designed for retail environments where headphones and speakers can be demonstrated in a structured and consistent way.

Audio content can be played directly from the integrated MP3 player, providing brands with a reliable solution for permanent in store demonstrations.

Customers can also connect their own smartphone via Bluetooth and listen to familiar music, allowing them to evaluate products using the content they know best.

The system supports up to 5 independent Bluetooth listening positions from a single unit, making it ideal for product comparison displays and interactive retail demonstrations.

Easy Setup & Deployment

The integrated OLED display and WiFi setup menu allow installers to configure the system directly through the onboard menu or via a standard web browser on a smartphone, tablet or laptop.

No software installation is required, allowing fast setup and easy configuration in retail environments.

In addition to the integrated MP3 player and Bluetooth streaming, the Multi Cast supports AUX and Optical audio inputs, providing flexibility for a wide range of retail applications.

Every BRIQX solution includes a free Quick Scan Service to review compatibility and installation requirements before deployment.

The BRIQX Multi Cast is part of the broader BRIQX ecosystem.
