

Retail bluetooth transmitter for headphone's & speakers

With the BT One you can now demonstrate Bluetooth headphones and speakers in a retail environment. The BRIQX BT One transmitter turns any existing or new solution into a Bluetooth solution in an instant. The latest headphones and speakers often no longer have an audio connection. The audio communication is then established via a Bluetooth connection. To give the consumer a product experience, establish a Bluetooth connection by connecting the BRIQX transmitter to the jack output of the audio source.

Select the Bluetooth audio output on the transmitter display to establish the connection. The BRIQX module maintains a continuous connection and automatically re-establishes it if the connection is disconnected by the user. This small module is easy to install as an upgrade in existing or new solutions. Plug in the audio jack, turn on the module and connect it to any audio source, select the bluetooth output and the experience is ready to go.

FEATURES AND BENEFITS

1. Installed in minutes.
2. Easy to select Bluetooth device.
3. Automatically reconnect due to disconnection.
4. Easily upgrade existing solutions that have an audio jack connector.
5. Small form factor, fits easily into any display.
6. USB powered from the experience or external 5V power supply*.
7. Extends the lifecycle of current technology.

The BT one Transmitter package includes: 1 BT One transmitter, 1 audio jack cable, 1 USB A to USB B cable and 1 manual. *The 5V power supply is not included.
