connection.

BLUETOOTH
Connect headphones
and speakers wirelessly.

AUX
Analog connection for
any audio device.

EMBEDDED MP3 PLAYER
Integrated player for reliable
audio playback.

LED CONTROL
Product highlighting
and visual feedback.

Future Proof Your Audio Displays

The BRIQX Connect All Audio Player is designed for retail audio displays that need to support multiple product generations over time.

Each Connect All unit supports one headphone or speaker per demo position. Products can easily be replaced while maintaining the same infrastructure, thanks to support for USB Audio Class, Bluetooth and AUX connections.

Audio content can be triggered through connected push buttons or wirelessly controlled display solutions, enabling brands to create engaging and consistent product demonstrations.

This allows retailers, brands and integrators to introduce new product generations without redesigning the installation.

Remote Management & Rollout Support

Through the BRIQX Control platform, devices can be monitored and managed remotely.

Firmware updates help ensure products operate correctly during rollouts and product replacements. Compatibility checks and configuration management support a consistent retail experience across all locations.

To support successful deployments, Createq offers a **free Quick Scan service**. Our engineers review product compatibility, connection requirements and installation considerations before rollout, helping reduce installation risks and save valuable time during implementation.

CONNECT ANY AUDIO PRODUCT

1. Supports USB Audio Class, Bluetooth and AUX audio devices.
2. One headphone or speaker per demo position.
3. Integrated MP3 player for standalone audio demonstrations.
4. Products can be replaced while maintaining the same demo infrastructure.
5. Future proof platform for new product generations.
6. Compatible with wired push buttons and wireless display solutions.
7. Consistent product demonstrations across all retail locations.
8. Flexible integration for retailers, brands and retail integrators.

OPTIONAL FEATURES

1. Connect LED to highlight selected products.
2. Additional buttons.
3. Data logger.
4. Capacitive touch panel.
5. Consumer tracking sensor.
6. Add sensors (to activate LED, and start a audio).
7. Qbus integration with other BRIQX products.
8. Free Quick Scan compatibility validation.

This package includes: 1 x Connect All Audio Player and 1 x 12V power supply.
