

Quickstart Guide BRIQX Bluetooth Multi-Cast

CONNECT NEW BLUETOOTH DEVICE

1. Connect the supplied 12V power adapter to the Bluetooth Multi-Cast Interface and the mains power.
2. Wait until the interface has finished booting and the PUSH 2 SEC message is shown in the display in the interface, push down on the rotary knob to go into the menu of the interface.
3. To connect a Bluetooth device to the Bluetooth Multi-Cast interface go into the DEVICES menu option and select an empty device slot using the rotary button, push the rotary button to select it.
4. You now see the SCAN NEW message shown on the screen, put the Bluetooth device you want to connect to the interface (BT Headphones or BT Speaker) in pairing mode, find out how in the manual of the specific device.
5. Now select the SCAN NEW function on the interface by pushing down on the rotary button, the interface will now scan for new Bluetooth devices in the vicinity and will list them on the display, you can scroll through the list of found devices with the rotary button, when you see the device listed you want to connect to push down on the rotary button to select.
6. The Bluetooth device is now paired with the interface and you can select the device with the connected pushbutton corresponding with that position in the interface, audio will then start playing on the BT device, do this for all devices you want to connect to the interface.

The BRIQX Bluetooth Multi-Cast interface is now ready for use, to re-establish the Bluetooth connection after the Bluetooth device might have disconnected due to charging or battery saving functions in the Bluetooth device, please power on the Bluetooth device using the designated button for this on the Bluetooth device itself.

For additional settings and options please consult the full user manual available on the Createq support section on our website found here : <https://www.createq.nl/support>
