

ISO PYRAN® S

For fire resistance and protection of people and property

Now available for UK manufacture

Fire rated insulating glass units

ISO PYRAN® S

ISO PYRAN® S incorporates PYRAN® S fire-resistant glass in a double-glazed unit. This offers a useful option where enhanced properties are required, not only for protection against fire but also heat and noise insulation, optimizing energy efficiency while retaining the enduring aesthetic appeal of PYRAN®.

The stability of ISO PYRAN® S on exposure to UV radiation, as well as fluctuations in temperature and direct sunlight, makes it ideally suited for use in facades and roofs. While light transmission remains high, anti-glare protection is enhanced and unwanted heat and sound factors are tightly controlled.

ISO Pyran® S is a trademark of Schott AG.

Your Advantages

- Excellent sound insulation ideal for buildings in busy urban areas.
- Outstanding heat insulation and sun protection for energy efficiency.
- Excellent fire resistance qualities, with strong aesthetic appeal.
- Dip-coated anti-reflective glazing option available.
- Lamination option provides safety against falling.

Areas of application

PYRAN® has been internationally approved and ideally suited for:

- Doors
- Partition walls
- Smoke screens
- Facades
- Skylights and rooflights
- Roofs
- Lift door glazing
- Lift shaft glazing
