Activity Priorities and Description

Program Key Priority Area *

Population Health

Other Program Key Priority Area Description

Aim of Activity *

Improve patient access to Endometriosis and Pelvic Pain diagnostic, treatment, and referral services by enhancing in clinic services, capacity building and streamlining referral pathways to specialist care.

Description of Activity *

Establish and support an Endometriosis and Pelvic Pain Clinic (EPPC) located in Dandenong within the SEMPHN region. The EPPC will provide multi-disciplinary care, improve access to diagnosis and promote early treatment for endometriosis and pelvic pain, and management of perimenopause and menopause symptoms.

The EPPC will:

- Improve care for priority populations through culturally competent practices, use of bilingual health workers and promotion of bulk billing services
- Expand services for endometriosis, perimenopause and menopause management through additional training for the GPs and practice nurses within the EPPC, ensuring evidence-based care for symptom management, and establishing referral networks with allied health and specialist treatment providers
- Enhance workforce capability by supporting primary care staff within the EPPC to access advanced training and professional development
- Develop patient education resources and self-management tools improving provider and community awareness of available care and support services.

Data will be used to support program evaluation and continuous quality improvement. The data will be further used to identify areas for improvement as well as how the program might be refined, improved or expanded.

The broad priority of improving access to primary care for communities with high rates of potentially preventable hospitalisations has been identified from the current Needs Assessment with the EPPC activity specifically supporting and prioritising women's health.

Activity Priorities and Description

Program Key Priority Area *

Aged Care

Other Program Key Priority Area Description**Aim of Activity ***

Facilitate, coordinate and implement strategies to improve access to palliative care services at home, improving outcomes for palliative care patients.

Description of Activity *

The 1.0 FTE Program Lead utilises the current needs assessment and literature review to inform the final planning, development and delivery of activities to coordinate improved access to palliative care services at home.

SEMPHN is focussed on:

- improving communication between General Practice and community palliative care services by embedding referrals into the most frequently used PalCare software platform.
- increasing knowledge and use of Advance Care Planning (ACP) through education, online information, and a pilot ACP model of care in general practice in collaboration with local hospital ACP services
- improving access to palliative care medications for people in the community by implementing a Core Medicines List across General Practice and pharmacy that includes an online resource map
- increasing knowledge and awareness of palliative care in General Practice through partnership with Southern Melbourne Region Palliative Care Consortium (SMRPCC) to facilitate palliative care education/information sessions to general practice staff.

Testing of an integrated secure eReferral form is currently underway with General Practitioners (GPs) and Palliative Care service providers. The eReferral form is intended to increase the referral speed, reduce the number of errors from manual entry of patient information, and increase efficiency for both GPs and Palliative Care service providers. This solution arose out of SEMPHN’s 2022-23 Needs Assessment, which identified the issues experienced by GPs when referring patients to and interacting with Palliative Care providers.

SEMPHN will shortly submit its final Greater Choice for at Home Palliative Care report to the Department of Health and Aged Care via Scyne Advisory. Scyne Advisory has been conducting an Australia-wide evaluation that will include quantitative and qualitative data collection and outcome measurements, including baseline data where available.

SEMPHN continues to employ a Program Lead and in 2025 SEMPHN updated its Greater Choice for at Home Palliative Care (GCfaHPC) needs assessment.

In 2026 the Program Lead and stakeholder group will develop targeted interventions and activities.

SEMPHN’s Program Lead works closely with the Victorian Tasmania PHN Alliance (VTPHNA) GCfaHPC Community of Practice who will ensure coordinated approaches and activities across PHN boundaries as benefits the local service systems.

SEMPHN Strategy 2023-2028: Path to Impact
Pillar 3: Vibrant Primary Health Services
Pillar 4: Innovation and System Reform

Activity Consultation and Collaboration

Consultation

SEMPHN will continue to consult regularly with the Southern Metropolitan Region Palliative Care Consortium and its members in the planning and implementation of this program. This consortium covers all Palliative Care services in the SEMPHN Catchment.

Collaboration

SEMPHN will continue working with:

- General Practices
- Healthlink
- Palcare Software
- Pharmaceutical Society of Australia
- Monash Health ACP clinic
- Alfred Health ACP Service
- Peninsula Health ACP Service
- Southern Metropolitan Region Palliative Care Consortium
- Palliative Care South East
- Peninsula Home Hospice
- Calvary Bethlehem
- Cabrini Health
- Monash Health
- Bayside Health - Alfred Care Group and
- Peninsula Care Group
