

Stowell Concrete encourages builders' merchants to collect in bulk from its Somerset-based manufacturing works – Monday to Friday – 7.30am to 4.30pm.

Most items are ex-stock but products like T-beams are generally made to order and would require notice prior to collection.

Please contact our sales office on 01934 834000 to clarify which of our three works is best to collect from... Yatton BS49 4QN – Holcombe BA3 5DA – Cheddar BS27 3DQ.

The vast majority of products are not supplied on pallets but are placed on the bed of the collection vehicle with a clamp truck – for these products pallets can be purchased if necessary but they are non-refundable.

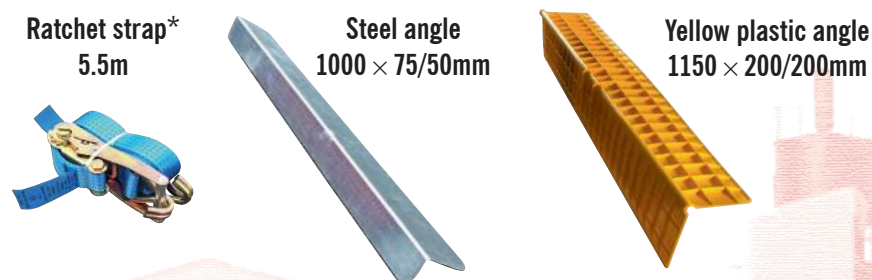

Customers can bring their own pallets but they must be large enough and substantial enough to support the products purchased.

The collection vehicles can be similar to any of our delivery vehicle options, as well as four wheeler, six wheeler lorries and transit-sized vans – if they have drop sides and are long enough with carrying capacity – we can calculate the weight of product being collected.

The customer or their haulier is responsible for securing their load – our products are generally banded with polyester bands but these should not be relied on for load security.

Brick nets or sheets and straps/angles can be used to secure the load – angles and ratchet straps can be purchased from any of our works.

Hi-viz and steel toecap boots must be worn in our yards – hi-viz waistcoats can be purchased if necessary.

* Capacity load 2,500kg, breaking load 5,000kg. Do not use for lifting.
