(*) • All other pitches 90mm fly rafter. • 75mm Fly rafter required for 35° and over. • In some instances a kick out may be required, please consult your local installer or Roofing Industries.						
<b>All measurements must be checked on site prior to installation.</b>						

#### Important Set Out Notes:

- Soffit bearer fixed to right hand side of the rafter, looking at the building.
- To ensure birds cannot enter the roof space leave the bottom purlin off until fascia has been installed.
- Based on minimum purlin thickness of 45mm.
- A 10mm soffit clearance has been allowed for.
- 150 Multifit Small Panel Fascia System is suitable for use with longrun/metal tile roofs with sloping soffits up to 35°.
- For gable end roofs, outriggers to be from finished timber size 90x45mm, gable end truss drop 90mm.
- Soffit bearers are required on all hip corners.

#### Important Product Notes:

- Store product securely on site away from incompatible materials and protect from wind and operating machinery.
- Product surface protected with plastic film should be stored under cover, away from u/v light, and film removed immediately after installation.
- It is a requirement of the products warrantee to obtain and thoroughly read a copy of Roofing Industries handling, storage and installation guide. Available from the supplying branch or alternatively from [www.roof.co.nz](http://www.roof.co.nz)

#### Steps To Follow:
