HEX Detex™

Hexavalent Chromium Detection Swabs

Detect Hazardous Contamination - Instantly

Fast, field-ready swab kit to detect Hexavalent Chromium CR(VI) contamination on surfaces and in water & soil samples.

✓ Rapid Detection

Clear visual results in minutes

✓ Proven Sensitivity

Detects down to 0.05 µg

Independently Tested & Verified

✓ Field Ready

Instant results, right where you need them

Simple Detection Process

Mix	Dip	Rub	Wait	Identify
• Pour solvent (A) into powder (B). Cap and shake until dissolved.	• Dip the cotton applicator into the solution.	• Gently rub the soaked applicator on the test area for up to 30 seconds.	• After two to three minutes a pink to purple color appears on the applicator if CR(VI) is present.	• The intensity of the color provides an estimation of the CR(VI) content in the sample.

*Maximum efficacy is maintained for up to 5 days after mixing
