Salary Guide & Hiring Trends 2026

Switzerland's job market is undergoing a recalibration. Talent mobility has slowed, candidate optimism has softened, and hiring cycles are stretching. Yet, agile solutions - such as temporary and interim placements - are gaining traction. In this evolving landscape, culture, clarity, and customisation are emerging as key imperatives for attracting and retaining talent. Discover how flexible benefits, internal development, and a strong EVP can unlock opportunity in a cautious but forward-looking market.

A Market Recalibration

As we head into 2026, salary levels across most sectors remain flat. While this may not sound like good news, it signals a stabilisation after years of volatility. Employers and candidates alike are adapting to a new normal - one that increasingly relies on temporary and interim roles to manage uncertainty. Encouragingly, over 50% of these roles convert into permanent positions, making them a strategic gateway for both companies and professionals.

The Swiss job market is currently navigating a period of reduced talent mobility, marked by cautious candidate sentiment and slower hiring activity - though pockets of momentum remain, particularly among bankers in Private Equity, construction and project engineering.

Professionals are adopting a "wait and see" approach, leading to fewer replacement hires and longer recruitment cycles. The overall effect is reminiscent of being stuck in traffic on the motorway - progress is possible, but slow and unpredictable. In this context, temporary and interim roles function much like motorcycles navigating through congestion - more agile, responsive, and capable of progressing where traditional hiring routes remain constrained.

While 2021–2023 were years of growth, 2026 is shaping up to be a year of strategic recalibration. Yet, just as traffic eventually clears, this pause may be temporary. Companies that remain proactive and adaptable will be best positioned to accelerate when momentum returns.

What Candidates and Employees Want

To reduce attrition and attract available talent, employers must understand what employees and jobseekers truly care about. Culture plays a significant role in their decision to stay with or join an organisation. Candidates typically seek inclusive environments that support career development and continuous learning.

Compensation packages remain a critical part of the talent equation. While base salaries may stay relatively flat, candidates' expectations around salary increases have softened. According to our Candidate Confidence Salary Index, the proportion of jobseekers anticipating a salary increase has dropped from 74% to 59% since the start of 2025.

In this context, flexible benefits can be a powerful differentiator. Move beyond a "one size fits all" model - customise benefits to reflect the diverse priorities across your workforce. For example, gym memberships may appeal more to younger employees, while enhanced pension contributions could resonate with more experienced staff. Flexible benefits not only boost retention but also reinforce your commitment to employee wellbeing.

Yannick Coulange

Managing Director
PageGroup Switzerland

Most importantly, ensure hiring managers can clearly articulate the full value of your offer. Candidates are quick to walk away if the benefits aren't communicated clearly and effectively. Organisations that train their leaders to discuss compensation transparently gain a distinct competitive edge in attracting and retaining top talent.

Candidates are seeking flexibility and relevance over perfection; a well-articulated offering is often enough to meet expectations.

Flexible Employment: A Strategic Advantage

Flexibility remains a defining trend. For experienced professionals, it offers valuable opportunities - remote work, part-time arrangements, and even sabbatical-style scheduling (e.g., working 90% and taking the remaining 10% as a block).

Once avoided by many Swiss-based professionals, temporary and interim roles are now widely accepted. These "plug and play" positions offer agility and access to talent while helping employers manage headcount constraints. At the same time, they offer candidates opportunities to potentially convert to a permanent role while keeping their skills and CVs marketable.

Switzerland faces a talent shortage, exacerbated by low unemployment and the retirement of skilled Baby Boomers. Temporary and interim roles play a further role in helping this transition. Notably, they tend to benefit experienced professionals the most, offering them a flexible yet impactful way to stay active in the workforce.

Navigating the Talent Landscape: Guidance for Candidates and Employers

In today's evolving job market, both candidates and employers must adapt strategically to remain competitive and resilient.

For candidates, staying active and marketable is key. Temporary and interim roles can offer valuable experience and keep your skills sharp while opening doors to long-term opportunities, especially if you are currently unemployed. At the same time, don't overlook the potential for internal growth. Sometimes, the best move is to nurture the grass you're already standing on - invest in your current role and explore ways to expand your value within your organisation.

For employers, retention is more than just a metric - it's a mirror reflecting your culture, leadership, and alignment of values. To build a compelling talent strategy, it's essential to anchor your offering around a strong Employer Value Proposition (EVP). This defines the unique combination of experiences, values and benefits your organisation provides to attract, engage, and retain top talent, serving as the strategic backbone of both employer branding and talent acquisition. Ensure that hiring managers can confidently articulate your company's culture, growth opportunities, and total compensation package to reinforce the EVP at every touchpoint.

AI is also reshaping the talent landscape. In our latest Talent Trends study in Switzerland, 55% of respondents reported regularly using AI-enhanced and generative AI tools. Among them, 69% said these tools have increased their productivity - highlighting a real shift in the playing field. Employers who embrace AI as a tool for augmentation - not replacement - will be better equipped to innovate and attract future-ready talent.

Key Takeaways:

- Temporary and interim roles offer strategic flexibility for both employers and candidates.
- A strong EVP and clear communication are essential for retention.
- Internal growth, flexible benefits, and AI-readiness are powerful levers in a cautious market.

Banking & Financial Services

The Swiss financial sector is navigating a climate of heightened caution, shaped by ongoing macroeconomic uncertainty. This environment is slowing down recruitment processes, leading to longer decision cycles and more selective approval procedures. Companies are adopting a strategic and measured approach to hiring, focusing on critical needs.

Targeted growth is emerging in front-office roles, particularly in wealth management and private markets, with a strong emphasis on UHNW and institutional clients. This shift is driving demand for hybrid profiles - professionals who combine commercial acumen with technical expertise and regulatory knowledge.

Despite a more selective job market, candidate expectations remain high. Flexibility, competitive compensation, and clear career progression continue to be decisive factors in attracting top talent. Employers must therefore strike a balance between rigorous selection and meeting these evolving demands.

Senior roles are often filled through trusted networks, making access to these opportunities more discreet. To remain competitive, SMEs increasingly rely on specialised recruitment agencies with deep market insight and strong relationships, enabling them to identify and engage the right candidates.

Commodity Trading

Post-COVID effects continue to influence the job market in the commodity trading sector. Many professionals hired between 2021 and 2022 still maintain high salary expectations, shaped by the exceptional conditions of that period. However, the market has since stabilised, and compensation levels are gradually returning to more sustainable standards.

In parallel, data analytics, risk management tools, and the growing adoption of artificial intelligence are transforming operations, driving strong demand for hybrid profiles that combine financial expertise with technical skills.

Energy and metals segments are particularly dynamic, supported by favourable market trends and geopolitical factors, which are actively stimulating recruitment of specialists in these areas.

Finally, the rise in temporary assignments, often linked to backlog resolution or specific project needs, reflects a strategic shift among companies seeking greater flexibility and tighter cost control in a more cautious economic environment.

Engineering & Manufacturing

After post-COVID salary spikes, industrial wages in Switzerland have mostly stabilised, with fewer disparities among similar skill levels, though niche technical roles remain competitive.

Candidates are highly employable but cautious, prioritising salary amid economic uncertainty - younger talent also values career growth and company culture.

Companies are focusing on upskilling current staff for evolving roles, but still recruit specialists in AI and automation to boost innovation.

Technical managers are taking on growing HR duties, such as attracting and retaining talent. Their role now begins at the interview stage and strongly influences the candidate experience.

Firms seek versatile professionals who balance technical expertise with strong interpersonal skills, yet such profiles are scarce, prompting more internal development and clearer role definitions.

Environmental, Social & Governance

Corporate Social Responsibility - a strategic imperative facing temporary headwinds: While ESG transparency requirements remain firmly in place, companies are showing signs of slowing down their compliance efforts. Fewer resources are being allocated to proactive adaptation, reflecting a more cautious, wait-and-see approach. This deceleration, however, appears to be cyclical rather than structural, as regulatory pressure continues to build.

Climate action goals - particularly carbon neutrality targets - are still publicly upheld, but momentum is waning. New commitments are becoming less frequent, and implementation timelines are increasingly delayed, highlighting the growing tension between environmental ambition and economic constraints.

Social responsibility initiatives, especially those related to diversity, equity, and inclusion (DE&I), are also losing visibility and funding. In a context where operational efficiency and short-term priorities dominate, these programmes are often deprioritised.

Sustainable investment is experiencing a marked slowdown. Investor appetite for ESG funds has cooled, capital flows are contracting, and sustainability criteria are no longer driving investment decisions as strongly as in previous years. This shift raises important questions about the long-term role of ESG as a catalyst for transformation.

Search for your dream job

In 2026, the job market is evolving within an environment marked by a degree of economic instability. In this context, companies are primarily seeking profiles that combine stability with agility. Employers are therefore favouring candidates who have demonstrated loyalty and the ability to commit over the long term, while also showing strong adaptability in the face of rapidly changing economic and technological models. Cultural fit and close collaboration with business functions have now become key success criteria in recruitment processes.

A solid technical background in accounting remains highly valued and sought after across many roles. Employers now expect controllers not only to master the P&L but also to demonstrate a broader financial vision, understanding the interplay between the various financial statements (balance sheet, cash flow). Increasingly, employers are facing challenges in finding experienced and autonomous accountants as well as accounting managers. Candidates showing stability and long-term commitment to their employers are often rewarded with higher compensation, as such profiles are more difficult to attract.

Recruitment strategies are shifting towards a more opportunistic approach. Companies tend to optimise existing structures rather than create new positions, assessing the performance and relevance of current employees. This reflects a clear intent to strengthen collective efficiency and cost control. Among large international corporations, competition between Switzerland and offshore hubs is intensifying. Economic conditions, customs-related risks, and the strength of the Swiss franc are prompting some organisations to reconsider the relevance of maintaining certain positions within Switzerland.

This dynamic also translates into accelerating demand for hybrid skill sets-combining financial expertise with proficiency in digital tools, business intelligence, AI, and ERP systems. The use of interim or contract-based solutions is increasing, particularly to support transformation projects, ERP implementations, or financial transitions. These profiles allow organisations to address immediate needs without compromising the stability of permanent teams.

Human Resources

In Switzerland, Human Resources professionals are no longer simply supporting transformation—they are shaping it. In 2026, HR teams hold a strategic position at the intersection of human, organisational, and cultural challenges.

Faced with an ageing workforce, companies are investing in continuous learning, reverse mentoring, and succession planning. This approach strengthens knowledge transfer and enhances the organisation's ability to anticipate future needs.

Simplification has become a priority. HR practices are evolving towards greater clarity, efficiency, and streamlined processes, all aimed at better serving employees and improving operational flow.

Salary transparency is gaining ground, driven by European regulations and growing societal expectations. Fair pay is now a key lever for attracting and retaining talent in a candidate-driven job market.

Flexibility at work has expanded beyond remote working. It now includes adaptable schedules, contract types, and role definitions, tailored to individual needs and market dynamics. However, flexibility remains limited in certain roles.

Artificial intelligence, while central to many discussions, has yet to significantly disrupt HR practices. HR systems are being rethought with caution, favouring scalable and adaptable solutions over radical change.

Finally, in a context of talent shortages, employer branding has become a critical priority. Organisations that succeed in attracting top talent are those that foster a strong culture, embrace transparency, and offer genuine flexibility.

The insurance sector remains a cornerstone of the Swiss market, supported by stable demand and increasing insured volumes-especially during times of uncertainty in other industries, which seek to mitigate risks and secure coverage. However, the insurance market currently faces a threefold challenge.

The first challenge is a widespread consolidation that has intensified in recent years-beginning with reinsurance companies, followed by insurance providers, and now brokerage firms, which are merging and adopting similar strategies to those seen in banking and financial services, such as cost reduction and process standardisation.

The second challenge lies in the difficulty of sourcing qualified local talent, despite market consolidation. This is due to a significant number of retirements in recent years, a lack of appropriate training in insurance-related fields, and a persistent shortage of skilled labour in Swiss insurance branches. The market remains highly domestic and largely closed to international profiles.

The third challenge involves regulatory adjustments, such as the mandatory Insurance Intermediary Certificate for all advisors and financial intermediaries, as well as the growing importance of Federal Diplomas, Master's degrees, and CAS programmes, which are rightly gaining recognition within organisations.

Despite a healthy market, economic uncertainty and shrinking margins are creating a lack of visibility. This has led to a greater reliance on temporary contracts compared to previous years, and a noticeable absence of clear strategic direction in some organisations-at a time when candidates are increasingly seeking clarity, visibility, and opportunities for training and career development with their employers.

Ultimately, we are witnessing a professionalisation of the insurance market, which now adheres to quality and regulatory standards and contributes significantly to Switzerland's economic activity and employment.

Information Technology

Despite a decline in demand compared to last year, the IT recruitment market in Switzerland remains dynamic in 2026, driven by the ongoing digital transformation of businesses. While generalist profiles are less sought after, there is strong demand for specialists in cybersecurity, cloud engineering, AI integration, and data analytics. Employers now favour hybrid profiles that combine technical expertise with interpersonal skills.

Even with relatively stable salaries, companies are intensifying their efforts to retain talent. Keeping top performers is no longer just about compensation-it's about the technological nature of the projects, purpose, company culture, and the quality of relationships.

Finally, the recruitment process, along with the management approach, plays a decisive role in candidates' final decisions. The candidate experience has become a strategic lever.

Legal, Tax & Compliance

Holding a Swiss or international bar qualification is now considered essential for candidates targeting Senior Legal Counsel or General Counsel roles in Switzerland.

Law firms are showing increased demand for senior lawyers with three to five years of post-qualification experience, particularly in tax law, construction, and real estate. Recruitment processes tend to be lengthy, often exceeding two months. However, there is a noticeable rise in temporary legal roles, which offer shorter and more flexible hiring timelines.

Legal professionals with expertise in legal tech (AI, data protection), compliance, and technology-related contracts are increasingly sought after.

Workplace flexibility continues to decline, with remote work options reduced from two days to just one - or none - per week.

Trends & salaries 2026

General Legal Counsel	230	270	350

In the legal and compliance sectors (in-house positions), the average bonus is around 20%. This is determined based on the performance of both the company and the employee. Bonuses are typically awarded starting from Senior Legal Counsel roles. Legal Heads may also receive a long-term bonus, in addition to their annual bonus, averaging around 50%. These figures should be considered with caution, as they vary significantly depending on the industry.

Non-Profit Organisations

Balancing Uncertainty with Resilience: Switzerland's not-for-profit sector is navigating a period of transition, marked by ongoing uncertainty but also by a notable capacity for resilience and reinvention. While many of the challenges seen last year have persisted - particularly due to funding decisions by key international donors - new dynamics are beginning to reshape the sector.

The number of job opportunities has declined significantly, especially when compared to the surge in activity during the Covid and immediate post-Covid years. At that time, many organisations expanded rapidly to meet urgent global health and humanitarian needs. Today, that momentum has slowed, giving way to tighter budgets and a redefinition of strategic priorities.

Organisations in the health space, in particular, are struggling to regain a stable growth trajectory. With reduced funding and shifting mandates, they face growing pressure to demonstrate measurable impact and operational efficiency.

That said, not all organisations are equally affected. Those with more diversified funding models - blending public, private, and multilateral sources - are proving more resilient. Many are even expanding their activities in high-growth areas such as climate action, sustainability, digital governance, and human rights.

Within this broader landscape, Geneva's international ecosystem remains a key barometer. While it reflects some of the sector's vulnerabilities - particularly around donor dependency - it also highlights the adaptability of well-funded and strategically positioned institutions.

For professionals in the sector, this evolving environment calls for greater agility, the ability to pivot quickly, and the capacity to apply cross-functional skills. The most in-demand profiles are those who combine technical expertise with a strong grasp of global issues and the ability to thrive in complex, multicultural environments.

Office & Management Support

Executive assistant and secretarial roles are undergoing a major transformation: In 2026, the role of an assistant goes far beyond administrative execution. It continues to evolve into a strategic function, central to team coordination, project management, and operational support for both teams and their leaders.

Companies are seeking professionals who can thrive in complex environments, manage multiple priorities, and actively contribute to the smooth running of internal processes.

On the talent side, expectations are clear: Firstly, part-time roles are increasingly attractive, offering better control over personal and professional rhythms. Secondly, social benefits (such as pension schemes and health coverage) are becoming key differentiators. Lastly and above all, meaningful work has become a decisive factor in choosing a position - often outweighing salary considerations.

It's worth noting that while flexibility remains a strong demand among candidates, it is still limited in these roles, particularly when it comes to remote work.

Administrative and support roles in Switzerland are no longer just about assisting - they are about structuring, anticipating, and embodying a new kind of efficiency: one that is more human, more committed, and more impactful.

Procurement & Supply Chain

Over the past two years, the Swiss logistics and supply chain job market has remained stable, with consistent demand for both permanent and temporary roles. High-value local functions - such as supply planning, inventory optimisation, and flow management - continue to be in demand, particularly in industrial, pharmaceutical, and distribution sectors.

Cost pressures are prompting some companies to offshore support functions to shared service centres abroad. However, technical and strategic roles remain largely based in Switzerland, where expertise in digital tools, customs compliance, and risk management is increasingly sought after.

Trade tensions and evolving customs regulations are adding complexity to cross-border operations. This is driving demand for professionals who can navigate regulatory frameworks, manage import/export risks, and optimise supply chain resilience.

Swiss SMEs continue to demonstrate agility, adapting their structures to remain competitive in a challenging economic environment while maintaining operational excellence.

Property & Construction

The uncertain macroeconomic environment, coupled with the implementation of Basel III agreements, slowed decision-making and consequently recruitment during the early months of 2025. However, the strength of fundamentals in the real estate and construction sectors supported a recovery in activity since late spring.

Falling interest rates are once again benefiting the investment sector, driving demand for professionals specialised in real estate transactions and asset management.

The housing shortage remains a key issue in cantonal development policies, fuelling construction activity.

Meanwhile, companies in architecture, HVAC, and construction are facing a decline in the number of qualified candidates, intensifying recruitment challenges.

As a result, talent attraction and retention are more critical than ever to build and sustain strong teams.

Search for your dream job

In a market marked by intense competition for talent, companies must demonstrate increased agility and enhanced attractiveness to secure the best profiles.

The most qualified candidates - often possessing specific sector knowledge, strong local experience, and language proficiency - are now more selective in their approach. They seek environments that offer genuine autonomy, evolving roles, and a clear understanding of how their work contributes to the company's strategy.

The scarcity of sales profiles with strong technical or sector-specific expertise on one hand, and specialised digital marketing experts on the other, is intensifying competition among employers.

In a market where negotiation skills, adaptability, and the ability to understand local dynamics are decisive, recruitment processes that are too lengthy or overly demanding increase the risk of losing talent to organisations capable of making quicker decisions.

As such, companies now differentiate themselves through their ability to recognise the value of these scarce profiles and to offer a framework that promotes sustainable performance and long-term engagement.

The background features a dark blue gradient with a vertical line down the center. Three large, overlapping circles are positioned horizontally across the page. The top circle is split by the vertical line, with the left half in a darker blue and the right half in a lighter blue. The middle circle is also split, with the left half in a medium blue and the right half in a darker blue. The bottom circle is split, with the left half in a dark blue and the right half in a teal blue. The text 'Michael Page' is centered at the bottom in a white serif font.
