## Heavy Universal Hanger

### Standard Installation With Blocking Instructions - Open Web Header

Applying a high load to the top flange of an open web joist can lead to failure of the joist itself (i.e metal webs buckling)

Adding a vertical blocking piece to the open web joist prevents buckling and helps transfer the load, therefore allowing the hanger to perform to a greater capacity.

#### STAGE 1

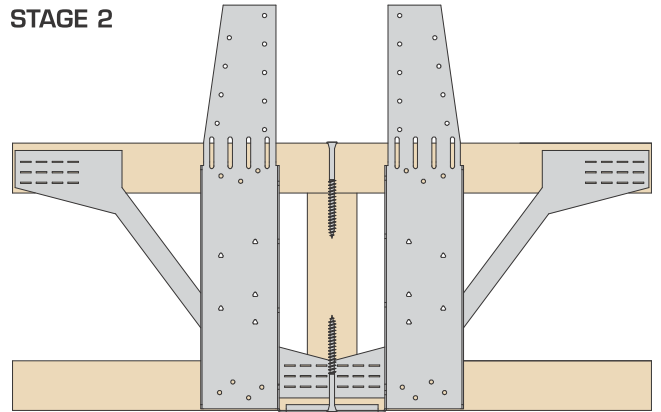

Vertical blocking piece to be built into Open Web Joist, centred on incoming hanger position.

Vertical blocking piece to be minimum 47 x 72mm C16 timber.

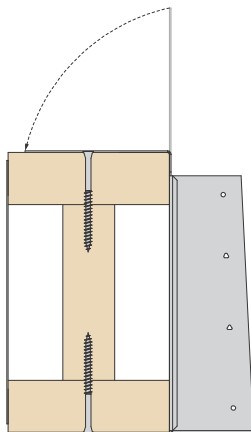

Fixed using Paslode 3.1 x 90mm annular ring shank nails.

#### STAGE 2

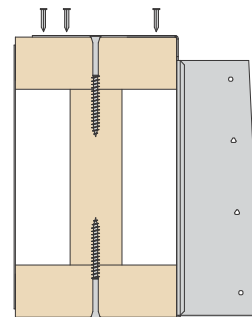

Position hanger against face of Open Web Joist with locating tab tight to underside of joist.

#### STAGE 3

Wipe over top tabs to give a flush fit to the joist.

#### STAGE 4

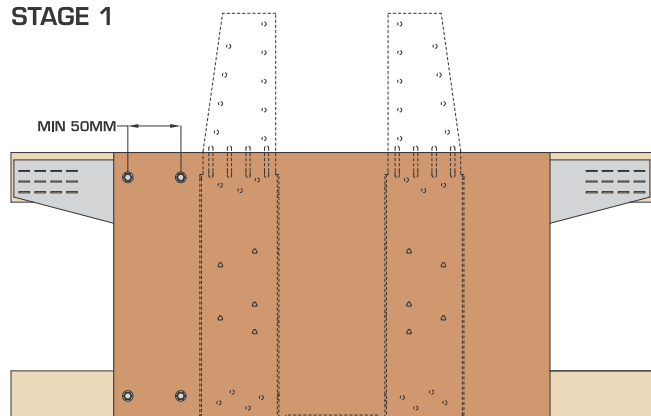

Nail top tabs into top chord of joist - Min 2No 3.4 x 35mm square twist nails into rear ply and 1No 3.4 x 35mm square twist nail into front ply per leg.

## Open Web Header With Plywood Gusset Instructions

## STAGE 1

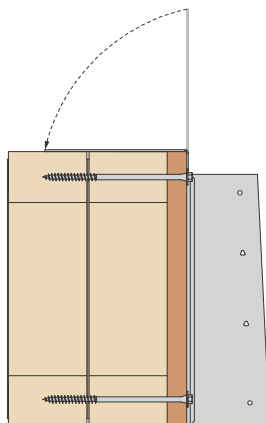

18mm plywood should be fixed to the face of the open web joist with 4No PSTS 6.5mm into the top chord and 4No PSTS 6.5mm into the bottom chord.

Plywood should be the full depth of the open web and of a width to give the screws the appropriate edge distance.

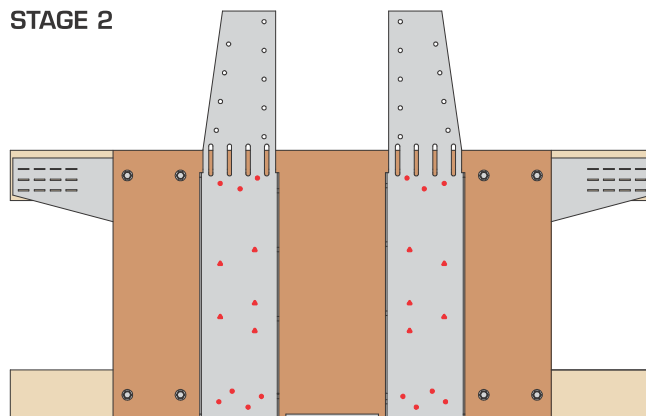

Paslode Structural Timber Screws should be used to fix the plywood to the open web joist. The screw length is dependant on the joist thickness.

### STAGE 3

Wipe over top tabs to give a flush fit to the joist.

## STAGE 2

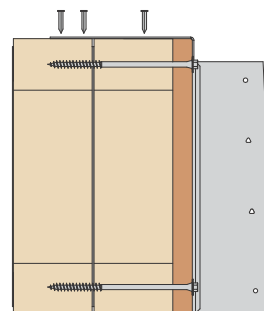

Position hanger flush with underside of joist.

Circular nail holes filled from bottom to top ensuring hanger side flanges are plumb.

All fixings are 3.4 x 35mm square twist nails.

Triangular nail holes should also be filled.

## STAGE 4

Nail top tabs into top chord of joist - Min 2No 3.4 x 35mm square twist nails into rear ply and 1No 3.4 x 35mm square twist nail into front ply per leg.
