SCAN~LINK

3.0 IN-CAB DISPLAY
ERROR CODE LEGEND

Error codes alert operators to system faults or abnormal conditions that may require attention or corrective action before continued operation.

| INDICATOR	MEANING	CORRECTIVE ACTION *Requires RapidPair in most cases*
	HARDWARE ERROR Centre is *SOLID RED*	Return the Antenna and In-Cab Display units for repair.
	COMMUNICATION ERROR Centre is *BLINKING ORANGE*	1. Check that power is within specification to the In-Cab Display and Antenna Units. 2. Check that your RapidPair dongle is compatible with both. Antenna & In-Cab Display units (see Product Briefings). 3. Check the Antenna & In-Cab Display pairing with RapidPair. 4. See the section 'In-Cab Display has only a Flashing Yellow Light' below for further insight.
	CONFIGURATION ERROR Centre is *BLINKING ORANGE*	***Follow these steps **after** checking you do not have Communication Error 1. Check that your RapidPair dongle is compatible with both the Antenna & In-Cab Display units (see Product Briefings). 2. Check the Antenna Node Properties. a. Under 'Operation', select the correct number of Antenna nodes using the "Multiplexer Lines" i. (1-4 Antennas) 3. Set the power level for each Antenna (1-4). 4. Click "ACCEPT". 5. If the error persists, contact SCAN~LINK for more support.
	THROUGHPUT ERROR	1. Check the 'Diagnostics' tab under the Node Properties of the Antenna with RapidPair. 2. Confirm that 'Threshold' = 20 and 'universal ID' = 0000000000000000 (16 zeros). 3. Try increasing the 'Detect Power', found in this same tab, to a maximum of 15dBm. 4. If the error persists, return the In-Cab Display & Antenna Units for repair.
