

SICURA, una finestra sul mondo delle persiane

Persiane in alluminio verniciato
Volets batants en aluminium laque
coated aluminium shutters

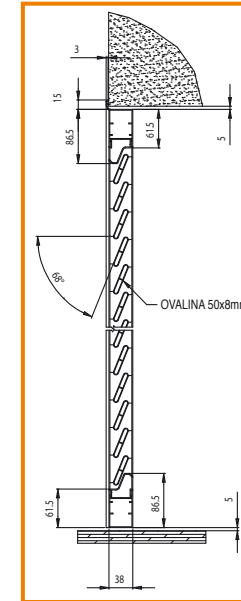

SICURA s.r.l. produce persiane in alluminio dal 1984. Le persiane SICURA sono interamente in alluminio, ciò che ci contraddistingue è la costruzione da materiale grezzo, infatti tutte le nostre persiane, tranne i modelli orientabili e Minipack, vengono verniciate quando sono già assemblate, questo garantisce una maggiore qualità e resistenza agli agenti atmosferici. L'esperienza maturata nel settore ci ha consentito di sviluppare il nostro prodotto in una vasta gamma di modelli, dando sempre la massima importanza alla qualità dei materiali.

SICURA s.r.l. produit des persiennes en aluminium depuis 1984. Les persiennes SICURA sont tout-aluminium, ce qui nous distingue est la fabrication en brut, en effet toutes nos persiennes, exceptées les modèles orientables ou les Minipack, sont laquées après assemblage, ce qui garantit une meilleure qualité et résistance aux agressions atmosphériques. L'expérience acquise dans le secteur nous a permis de développer notre produit dans une gamme étendue de modèles, en donnant toutefois une importance primordiale à la qualité des matériaux employés.

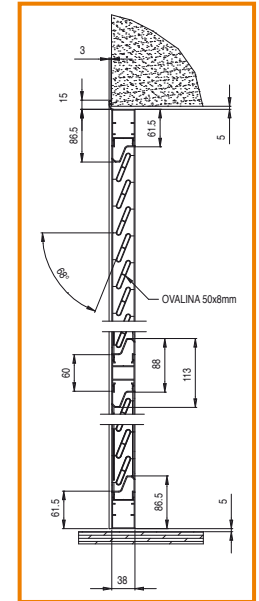

SICURA s.r.l. produces aluminium shutter from 1984. SICURA's shutter are completely in aluminium, our particularity is that we build the shutter from rough aluminium and then the coating is made on already assembled shutter, this system assure a product with long lifetime and easy maintenance. Only adjustable model and Minipack are made from pre-coated aluminium. Our experience in the field has given us the possibility to develop our product in a full range of models, giving always the most importance to the quality of the materials.
