LESTER
BUILDINGS

FAST, EFFICIENT CONSTRUCTION.

Lester Building Systems is a leading U.S. manufacturer of pre-engineered commercial building systems known for uncompromising quality, dependable structural integrity and long term value.

With all the benefits of metal buildings plus lower material costs and nimble design flexibility – Lester is an ideal choice for your commercial low-rise building.

Custom in every sense of the word, Lester Buildings can take on literally any shape, style and finish desired. Since 1947, thousands of Lester commercial structures have found their way into the U.S. landscape. The reasons to consider one for your next project are even more compelling today.

*Pre-engineered, yet
custom. Old-school,
yet cutting edge.
That's Lester Buildings.*

75' x 104' x 18'
White Sand, Regal Red
Fire Station

While there are many different options for commercial building construction, be it stud frame, steel, or masonry, one of the fastest growing methods today is pre-engineered wood frame systems. The reasons? Faster, more efficient and less expensive construction lead the lists.

Next in line is total design flexibility. But perhaps most important, is that the building can be completed, occupied and cash flowing up to 30% faster, or more, compared to other construction methods.

Another distinguishing aspect of Lester Buildings is the easier, professional planning and pricing approach made possible by Improv®, our industry leading design/pricing software. With this powerful tool, you and your Lester independent dealer or factory rep can design your building in your office, home or wherever it's convenient, often bringing it to life before your very eyes along with a detailed, professional quote. No other company can provide a faster, more responsive experience.

Brick, Stucco
Veterinary Clinic

"In our role as an architect and general contractor, we have a responsibility to deliver the best solution at the best price. We considered many construction options—steel frame, concrete block, precast concrete, stick-frame—and found Lester post-frame to be the best value for the shell structure."

—DAVID H.

Convenience Store

The advantages of post frame construction, such as quicker construction time and lower total project cost, make it a sensible alternative for commercial uses. The interior finishing and design were a snap because of Lester's flush wall frame.
