

Stantone Mechanical Handling Limited

Environmental Policy

This policy statement will be communicated to employees, customers, suppliers, contractors and on request.

Stantone Mechanical Handling Limited (SMHL) is a customer focused business providing its customers with Mechanical Handling Solutions of the highest standards in excellence, satisfaction, delivery and value for money.

SMHL is a leading provider in Sales, Renting and Leasing of Mechanical Equipment Aids such as Forklifts, Access Platforms, Utility Vehicles, Commercial Cleaning Equipment and the provision of Customer Support Services including training, servicing, spares and remedial works.

The company's management recognises the importance of the environment to our continued wellbeing and are therefore committed to follow, where practicable, the best environmental practice in providing a service to customers and in managing its own in-house activities.

This includes a commitment to responsible management of materials and waste in accordance with applicable legislation.

SMHL requires all employees to take responsibility for the protection of the environment in the conduct of their jobs.

The company shall therefore:

- proactively manage the impact of our business on both the local and global environment by identifying opportunities for continual improvement
- comply with all relevant environmental legislation and regulations and support initiatives which enhance or protect the environment while actively seeking to protect resources, through supply management, technological development re-use and recycling,
- provide our employees with information and training to enable them to integrate this policy into their work responsibilities.
- consult with interested parties and stakeholders on the introduction of new practices and products to ensure that the impact on the environment is minimised.
- monitor the progress in achieving these aims.

Service Engineers shall therefore

- comply with all customer's environmental rules and practices, whilst on their premises
- ensure all spillages are prevented from entering both the company's and customer's drainage systems
- remove all waste product from servicing activities and spillage incidents for disposal.

Nigel Martin
