## Insulock Flexi-Hose Thermocovers

### Insulock Flexi-Hose Thermocovers: Redefining Hose Insulation

With over 35 years of expertise in manufacturing removable insulation, Insulock has developed the Flexi-Hose Thermocover—a fully flexible, modular solution designed to fit all sizes and types of flexible hoses.

Engineered for versatility, Flexi-Hose Thermocovers adapt seamlessly to the shape of the hose, rotating and conforming as needed. Leveraging advanced 3D modelling technology and innovative design, Insulock has created the most sophisticated method of insulating flexible hoses available today.

Our Thermocover system accommodates any hose diameter or length and can be installed or removed quickly by a single person. Beyond ease of use, the covers deliver multiple benefits:

- Temperature control for improved process efficiency
- Reduced energy consumption for cost savings
- Enhanced safety by providing a protective barrier against burns

For applications requiring heat trace, the design also allows integration of heat trace directly within the Thermocover.

For more information about Flexi-Hose Thermocovers, please contact our sales office.

*Flexi-Hose Thermocovers are 100% Australian Made.*

### Flexi-Hose Thermo Insulation

- Fully Flexible.
- Rotate up to 360°.
- Easy to Install and remove.
- High Quality.
- Maintains insulation integrity.
- Suits most environments.
- Suitable for hoses with heat trace.
- Standard insulation max 249°C.

### Special Order

- We can manufacture alternative diameters, lengths and thicknesses.
- We can manufacture for applications in excess of 249°C.
- A variety of outer materials and insulation is available to suit particular applications or requirements.
- Consult factory for further details.
