Re-usable Modular Thermo Insulation

Insulock Re-usable Modular Thermo Insulation provides a flexible high quality solution to insulating critical equipment during maintenance or emergency situations.

Strips are available in various lengths with 1m & 2m being the most popular. Insulock can manufacture Modular Thermo Insulation up to a maximum continuous length of 15 metres with double stitching every 1 metre so that it can be cut on site to a desired length without cutting the insulation.

Each strip is 100mm wide and comprises of a Silicone outer layer with 13mm thick, high solubility non hazardous ceramic insulation, machine stitched with a Trifilament pure PTFE thread.

They are suitable for use in both indoor and outdoor applications and suit most industrial, commercial and manufacturing environments.

Installation is as simple as wrapping the modular insulation around the equipment so that each pass overlaps the previous and then fastening with pipe clamps or appropriate cable ties to hold in place.

When finished with Modular Thermo Insulation, remove fastening mechanism and store insulation strips until required again.

For further information regarding Modular Thermo Insulation please contact our sales office.

Re-usable Modular Thermo Insulation

- Fits all equipment and situations.
- Re-usable.
- Weather proof.
- High Quality.
- Multiple lengths.
- Suits most environments.
- Easy to store.
- Standard insulation max 249°C.

Special Order

- We can manufacture alternative widths, lengths, thicknesses.
- We can manufacture for applications in excess of 800°C.
- A variety of outer materials and insulation is available to suit particular applications or requirements.
- Consult factory for further details.
