Loading Zone

All vehicles must have a valid UniSA parking permit
or a registered payment at all times
Failure to do so will result in an EXPIATION NOTICE
in accordance with the UniSA Act 1990 and its By Laws

Permits, staff and casual parking solutions for every type of university user and staff.

Fully integrated end-to-end parking solutions creating a positive University parking experience.

Universities have many different types of people parking at different time periods; faculty, students, staff and visitors.

PARKi management solutions can cater to the different user groups, parking zones and their corresponding payment or permits system. The PARKi Licence Plate Recognition (LPR) solution implemented at university car parks ensures a fast and efficient user experience with a high degree of accuracy for both casual and permit users.

This allows us to future proof and easily manage and service our clients changing needs.

A COMBINATION OF TECHNOLOGIES TO SUIT MOST UNIVERSITY CAR PARKS

LICENCE PLATE RECOGNITION

Licence Plate Recognition allows for convenient and controlled entry into the car park for both permit holders and casual parkers. On entry, the boom gate will be raised automatically for Permit Holders who have their licence plate details stored on the car parking system. In the event of a misread, Permit Holders may present their backup barcode to identify themselves. Casual parkers enter the car park by inserting or tapping their credit card on the respective reader. On exit, permit holders will once again have the boom gate raised for them automatically whilst casual parkers will present their credit card to the Exit Station to process payment for their parking session and have the option to print a tax receipt.

CAR PARK RULE ENFORCEMENT.

Licence Plate Recognition system stops permit holders from abusing the conditions of the car park by sharing their permit with other users. This is achieved by remembering each individual patron's registration using the LPR system.

Increased Revenue for the car park operator as there is no longer a requirement for car park patrolling of patrons parked illegally meaning all users who enter the car park are either pre-paid or post-paid customers who will only be granted exit of stay for each matched vehicle, allowing for the automatic raising of the boom gate for vehicles that are within a free grace period.

The solution is environmental friendly due to the lack of consumables required for ticketless operations and any associated trash from used tickets.

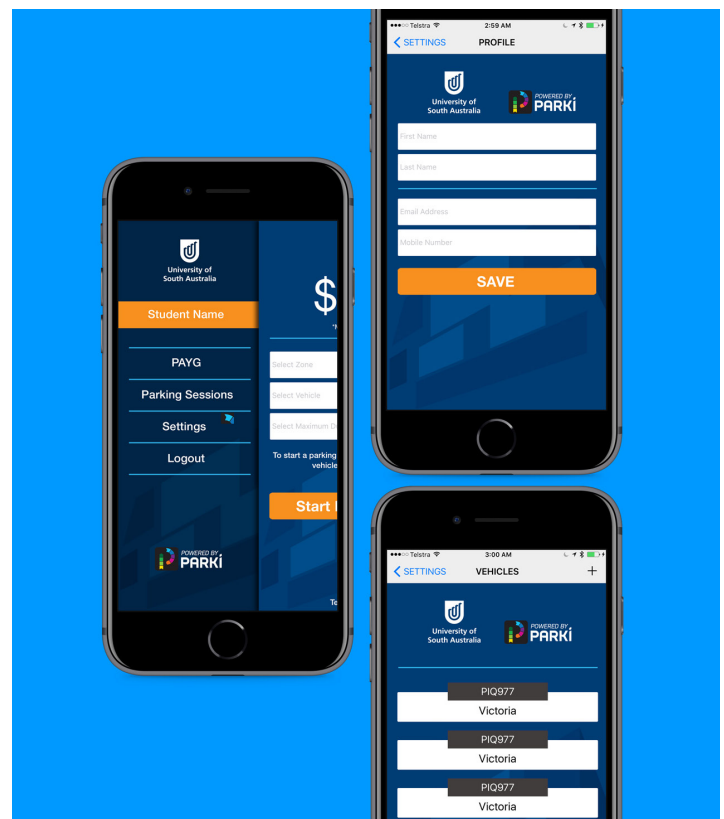

UNIVERSITY USER GROUPS

Casual patrons are provided parking by presenting their credit card at both entry and exit to calculate their duration of stay and subsequently their duration based parking fee. These users are also given the option of printing a tax receipt.

Permit Holders are provided with a unique backup barcode linked to their licence plates stored into the LPR's operating system. The LPR system will recognise the licence plate associated with the backup barcode and allow the permit holder entry and exit into the car park(s).

OUTCOMES FOR UNIVERSITIES

- Increased revenue due to reduction in manned patrol costs.
- Licence Plate System effectively improving users experience.
- Quick & easy use of CDS equipment to marginally decrease interaction time between customers and stations.
- Effectively improving traffic flow & user experience.
- Enforcement of car parking rules, customers may no longer cheat the system by getting sharing their parking permit. Improving revenue collection & fair trade.

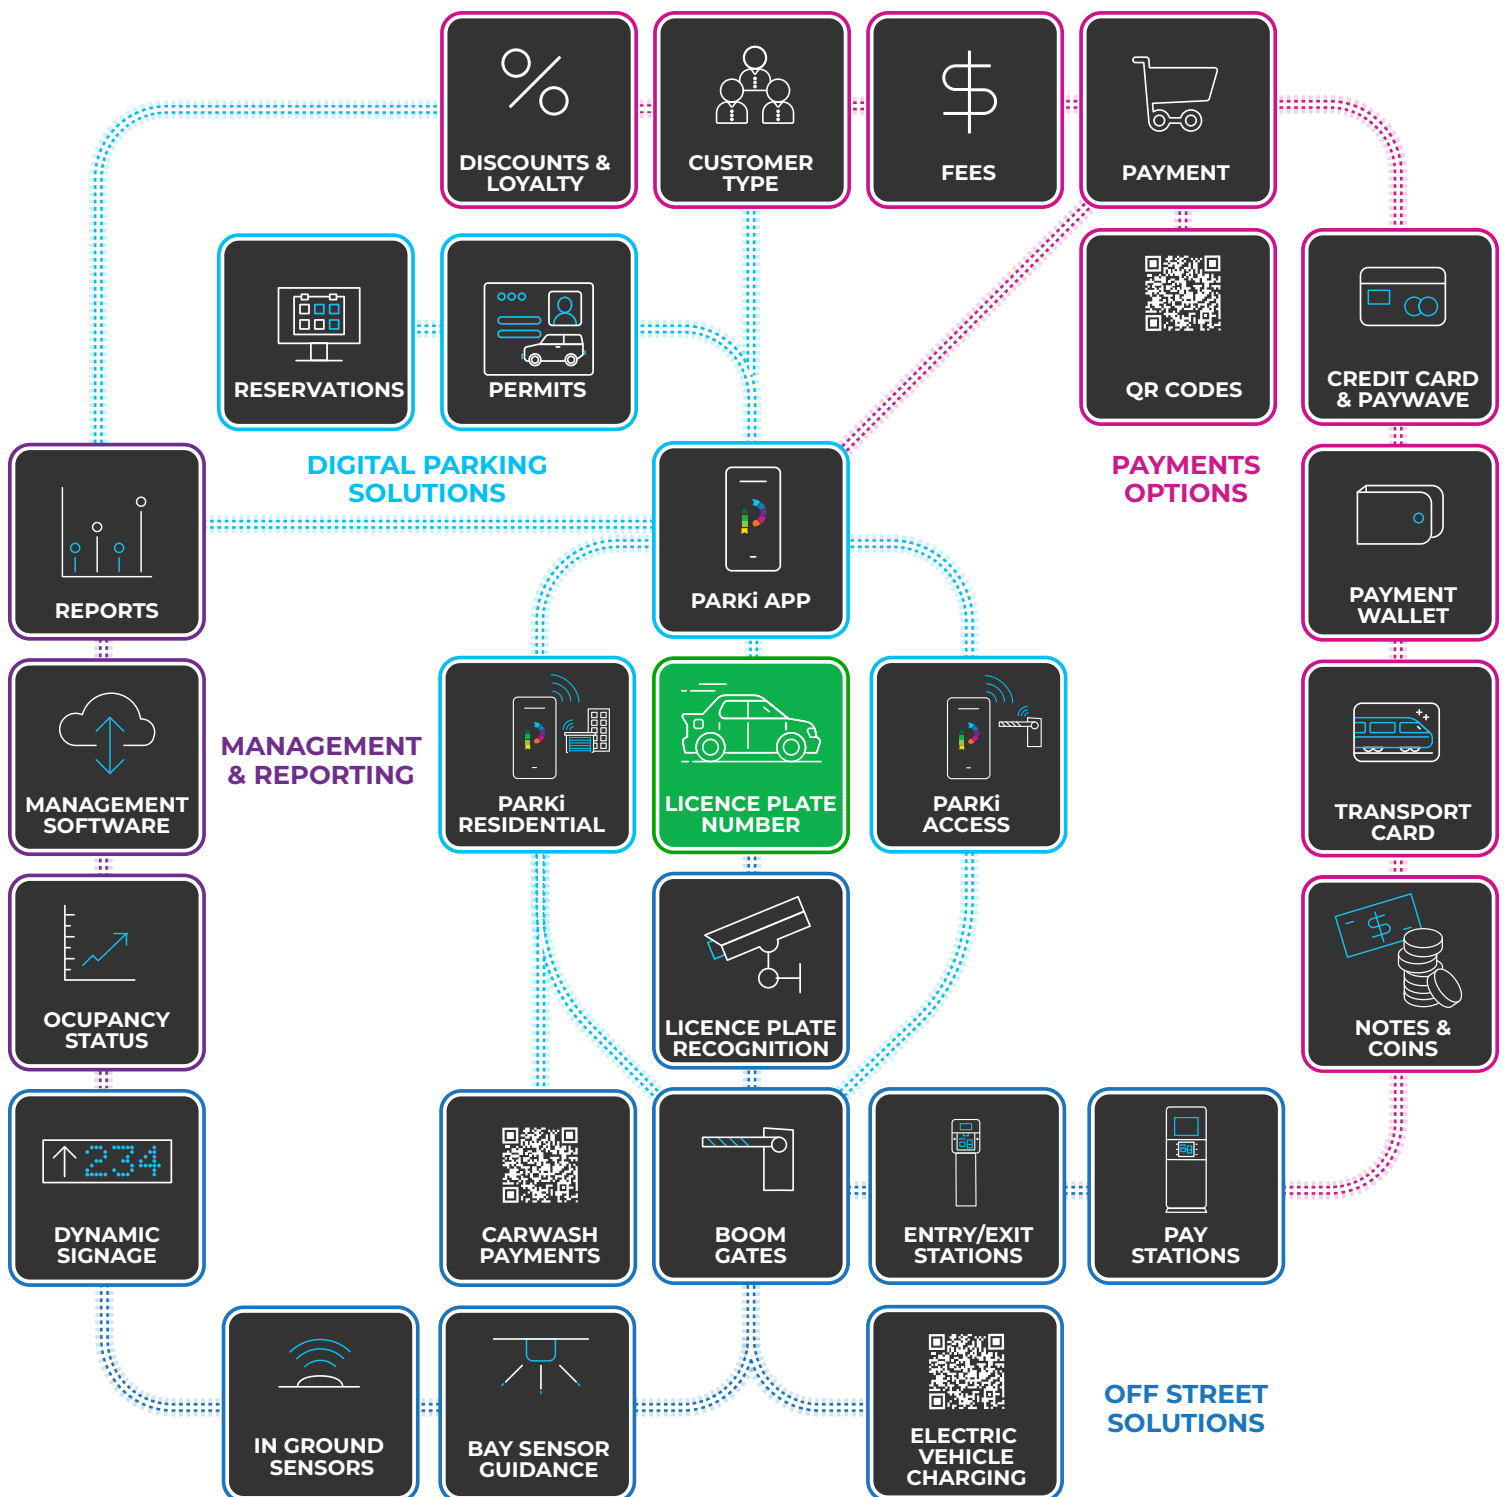

PARKi is an modular ecosytem of technologies that when combined with licence plate recognition, can deliver individual solutions to cater for specific business and car parking situations.

TRACK PERFORMANCE WITH REAL TIME OCCUPANCY DATA

Delivery of vehicle flow information and occupancy rates at the parking facilities to drivers facilities management can improve the mobility in cities and make parking management for staff and guests more efficient.

PARKi

CORPORATE & RESIDENTIAL PARKING SOLUTIONS

Tailored parking for your site and Industry type.

For over 25 years CDS Worldwide/PARKi has been tailoring Parking Management Solutions to a growing list of clients in a wide range of industries. Each client brings a different set of operational functions they need to achieve.

In most cases we can design a complete solution in house. This allows us to future proof and easily manage and service our clients changing needs.
