Let's "Mission" together!

The Parish of Saint James is joining Water 4
Mercy in the mission to give drink to the
thirsty and feeding the hungry.

If you were not able to attend the launch events on February 15-16, you are not too late to learn about Water 4 Mercy!

- 1. Visit www.water4mercy.org and the Water 4 Mercy mission page on the parish website.
- 2. Speak with Deacon Dave after Mass
- 3. Pray and discern about how you and your family will participate.
- 4. Stay tuned to announcements of events and other ways to participate.

Upholding human dignity one drop at a time...

Goal: \$125,000

\$100,000 to bring hope to the village of Chiuta in Jambia.

Now? Clean water brings hope and changes lives!

\$25,000 to the Sisters of Mount Carmel in Nairobi, Kenya

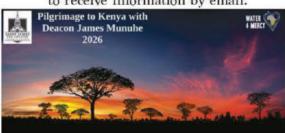

Why? Support the Sisters in their work with the people of

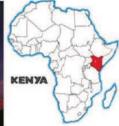

Nairobi in gratitude for the gift of Deacon James and his family

to our parish.

Considering joining in the Donor Pilgrimage with Deacon James and Father Shinu? Pick up a brochure with information at the Parish office or send an email to communication@stjameswv.org to receive information by email.

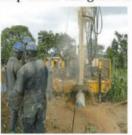

HOW DOES IT WORK?

Step 1 - Survey the land

Step 2 - Drill the well - we drill up to 150 meters (500 feet) deep below the ground.

Step 3 - Water quality checks.

Step 4 - Install solar water pump

Step 5 - Build a structure to house the water tank and system -this is built together with the villagers.

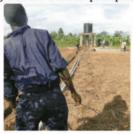

Step 6 - Install a water tank our tanks hold 10,000 liters (2600 gallons) of water.

Step 7 - Install solar panels to power the solar pump.

Step 8 - Dig the groundwork for pumping.

Step 9 - Install distribution points - between 10-15 distribution points (20-30 taps) are installed around the village.

Step 10 - Install remote monitoring system - this allows for monitoring and data collection, which makes the system resistant to breakdown, vandalism, and theft - problems typically faced by water systems installed by many aid organizations.

Step 11 - Connect the database to cellular communication technology - this allows the data to be transmitted in real-time.

Step 12 - Throughout the construction period, local managers work with the community to establish a solar water committee and conduct extensive training - this gives the community ownership over the entire process.
