Priority Care Pediatrics, LLC, (PCPeds) makes the health and well-being of our patients, their families, our staff and the surrounding community our top concern.

We recognize that there is heightened concern regarding immunizations. However, immunizations have been, and continue to be, one of the most researched medical practices in modern history. Immunizations are overwhelmingly safe.

There is no controversy regarding the safety and efficacy of immunizations. Immunizing your child using the current CDC schedule is the right decision. Succinctly, immunizations save lives.

Therefore, the healthcare providers of PCPeds, to maximize the benefits of immunizations, while ensuring the health of our patients in a safe manner:

- **require that all patients be fully immunized according to the schedule recommended by the Centers for Disease Control and Prevention (CDC)**
- **are willing to discuss any questions you may have regarding immunizations at a separate visit, scheduled specifically for that purpose**
- **require that immunizations be initiated at the first well visit**
- **and require that patients must follow our standard well visit schedule to ensure that immunizations are up to date.**
