

Weekly Market Review October 22, 2026

Overview

Tomato supplies will be short for the next three weeks, with occasional supply interruptions and substitutions between varieties expected during this period. Snacking tomatoes will be the tightest. The California tomato season has ended. The lime market remains firm across all sizes. Current forecasts indicate that smaller fruit will make up most of production, while 175-count and larger sizes remain extremely limited. Substitutions with smaller sizes will be necessary over the next several weeks. Hot pepper production is expected to stabilize across most varieties, with Fresnos remaining the shortest in supply. Zucchini, yellow squash, and beans were also tight this week. Steady production is expected for slicer cucumbers. U.S. table grape supplies are steady this week, and quality is outstanding on the new California crop. Cremini mushrooms are in short supply due to production declines and yield losses caused by green mold. We also expect Canadian tariffs on mushrooms to affect the industry over the coming weeks. In addition, costs are expected to rise across the domestic supply chain, particularly growing and operating costs.

Insect pressure, INSV, and Sclerotinia continue to affect production and are expected to remain challenges throughout the Salinas season. Demand is increasing, and supplies have become extremely limited. Quality issues are also rising as disease and insect pressure intensify, particularly in leafy greens (lettuce, romaine, green leaf, etc.). Many growers are now in Huron, providing some relief for lettuce supplies, although transfer fees may apply in some instances. Heavy diamondback moth and other insect pressure are major contributors to limited cabbage, broccoli, and cauliflower supplies. Growers are expected to hold to average order volumes for lettuce, romaine, broccoli, and cabbage when possible, but prorates should be expected for lettuce and romaine. Green onions remain limited and will continue to be held to strict averages, although relief is on the horizon. We are approximately four weeks away from the transition, and supply and quality challenges will likely continue until production settles into Yuma.

Avocado supplies remain steady, supported by strong production from Mexico and favorable growing conditions. Medium and large fruit are readily available, with particularly strong promotional opportunities on 40-count and 48-count sizes, while jumbo supplies continue to improve. The transition into the Aventajada crop is progressing smoothly, with no significant disruptions expected. New-crop fruit may have brighter green color, slightly lower dry matter, and minor rain-related lenticel markings, but overall quality remains consistent. Stable market conditions and promotional opportunities are expected to continue through November.

California cantaloupe and honeydew production is expected to continue through at least next week, although virus pressure in late-season fields could bring the Central California season to an earlier conclusion than the originally planned week of October 12. Yuma program is scheduled to begin that week with limited initial production, while the impact of recent Arizona rainfall is still being assessed. Sizing has shifted smaller due to weaker fields, cooler temperatures, and reduced daylight, with larger fruit already commanding premium pricing. Internal quality remains consistent, with strong sugar levels. Availability may be tight during the regional transition, particularly larger sizes.

Berry supplies remain mixed as recent rainfall and seasonal declines reduce California production, while Mexican and South American growing regions continue to transition. The most significant pressure is on strawberries, with California volumes declining sharply and supplies expected to remain extremely tight through December. Blackberry and raspberry availability remains limited, with hurricane-related rainfall contributing to lower volumes, reduced shelf life, and some quality concerns. Blueberry supplies remain slightly below expectations, although quality from Peru continues to be excellent. Overall availability should gradually improve in December as production increases across Mexico, Florida, and Chile.

Citrus markets are experiencing tight supplies of smaller sizes, particularly lemons, as fruit generally trends larger. A warm, wet winter is anticipated, and suppliers will work to mitigate potential supply disruptions caused by rain-related harvest delays. California Valencias are winding down, with Navels expected to begin in November. Cara Cara oranges are anticipated to begin in mid-to-late November.

Freight: Limited truck availability and record-high fuel costs are putting upward pressure on rates daily. We are seeing several freight companies, including ocean freight providers, implement fuel surcharges that will impact cost inputs.

El Niño: While it's still too early to predict how severe the impacts of El Niño will be, we do know that impactful storms will likely hit the Central Coast. We will be adding updates as we receive them, but for now all indicators are pointing towards a strong El Niño taking shape over the next several months. Yuma will likely see increased precipitation, so growers are planning to place crops across various growing regions to try to mitigate supply issues. The growers do have plans in place and will be acting accordingly to try to minimize the effects of the weather event as much as they can.

Alert List

- Asparagus – ESCALATED
- Boston/Butter Lettuce – EXTREME
- Brussels Sprouts – ESCALATED
- Cabbage – ESCALATED
- Green Onions – EXTREME
- Green Leaf – EXTREME
- Lettuce – EXTREME
- Limes (175's and larger) – ESCALATED
- Napa – ESCALATED
- Parsley Italian – ESCALATED
- Red Leaf – EXTREME
- Romaine/Romaine Hearts – EXTREME
- Squash, Zucchini and Yellow – ESCALATED
- Strawberries – ESCALATED
- Snow Peas – EXTREME
- Sugar Snap Peas – ESCALATED
- Tomatoes, Rounds, Romas – ESCALATED
- Tomatoes, Grape and Cherry (Snacking) – EXTREME

- White Asparagus – ESCALATED

Watch List

1. Blackberries
2. French Beans
3. Herbs
4. Ginger
5. Small Citrus Sizes on Lemons/Oranges
6. Spring Mix
7. Mushrooms – Cremini limited
8. Potatoes
9. Raspberries
10. Sweet Potatoes
11. Warm Veg – Western Mexico: Bell Pepper, Eggplant, Soft Squash, Cucumber

Fruits & Vegetables

Tariff Update: President Trump has officially confirmed that tariffs under the USMCA (United States–Mexico–Canada Agreement) will not be implemented on fresh produce from Canada and Mexico. As such, shipments from these two countries will remain unaffected. Tariffs will remain in place on certain items and countries such as Colombia until new trade agreements are reached.

Avocados: Avocado supplies remain steady, with strong Mexican production continuing to meet current market demand. Harvest activity is concentrated on medium and large fruit, while favorable growing conditions and seasonal rainfall have supported good overall size distribution. Consistent availability is contributing to competitive pricing across all sizes, with particularly strong promotional opportunities on 40-count and 48-count fruit. Jumbo supplies are also increasing, and promotional opportunities on larger sizes are expected to continue through November. The industry is transitioning smoothly into the new-crop Aventajada season without production disruptions. As additional new-crop fruit enters the market, customers may notice slightly lower dry matter levels, brighter green exterior color, and minor lenticel markings caused by recent rainfall. These are normal seasonal characteristics, and overall quality remains consistent. Mexican production is expected to support promotional activity throughout October and November. Demand should remain steady, with generally stable market conditions anticipated in the near term. Customers should contact their Mission representative for additional information regarding available promotional programs.

Bananas: Banana supply will be stable, but production is being curtailed due to virus pressure, low yields, and rising costs. Though quality is very good and current supply is adequate, consistency will be crucial. To navigate the coming year, ensure consistent supply, maintain regular ordering patterns, and proactively address any potential issues impacting the Banana program. Bunker rates will be released this week and next; expect them to be higher due to rising fuel costs.

Pineapples: Supplies have tightened up, and we have seen an increase in open market pricing. Contract volume is holding firm, but open market availability has dropped. Suppliers are expecting this to last for 2 to 4 weeks. This should not affect quality, which has been good overall.

Table Grapes: Production is winding down in California; the season is approximately 70% complete. Fruit quality is outstanding, with good-sized berries, very little shatter, and high Brix levels. Current varieties include Autumn Royals, Globes, Ivory, Timson, and Summer Royals. We will need to monitor the market closely as the season progresses because the crop is approximately two weeks ahead of schedule, potentially creating supply issues toward the end of the season. Black grape supplies are expected to decline rapidly, with the season likely to conclude in two weeks.

Berries

Strawberries: ESCALATED Strawberry supplies continue to decline following this week's rainfall across Santa Maria, Oxnard, Salinas, and Watsonville. Availability was already limited, with Santa Maria volumes down approximately 25% to 30%, and the latest weather will put further pressure on supply. The rainfall could effectively end the Salinas and Watsonville seasons, further reducing California production. Over the next several weeks, quality concerns may include reduced shelf life, bruising, softness, premature breakdown, misshapen fruit, and pale color. Supplies are expected to remain very tight through December, when production in Mexico and Florida should begin reaching full capacity.

Blackberries: WATCHLIST Blackberry volumes are increasing in Mexico, with direct exports to Texas underway, although organic availability remains light. Watsonville production is expected to remain steady over the next few weeks, but overall availability is limited, and organic volumes are expected to decline. Quality is generally good across both regions, with some softness and leaking fruit reported. Increasing Mexican production should provide additional supply as California winds down, although organic availability is expected to remain constrained.

Raspberries: WATCHLIST Raspberry supplies from Mexico remain on par this week, with exports already moving into Texas, but growers report reduced volumes following Hurricane Simon over the weekend. Rainfall has had a slight impact on quality, which remains fair to good overall. Some reduction in shelf life may be experienced over the next few weeks as the industry works through rain-affected fruit. Expect tighter availability and potential upward pricing pressure until production stabilizes.

Blueberries: Peru will remain the primary source over the next few weeks before production begins to wind down and supply transitions to Mexico. Peruvian volumes remain slightly below expectations and are forecast to hold relatively steady but limited through October, consistent with typical seasonal availability. Quality remains excellent across both conventional and organic offerings. Overall supplies are expected to improve in December as production from Mexico and Chile increases.

Citrus

Limes: ESCALATED Supply will slowly turn the corner over the coming weeks, and we should see some relief on FOB prices in general across all sizes. Currently we continue to battle sizing issues on new crop, with distribution skewing heavily toward 200s and smaller. Unfortunately, this is limiting larger sized fruit and there is a need to substitute with smaller sizes. We will continue to see this until the size curve stabilizes. Overall quality will continue to be a concern: external blemishes, oleocellosis, and limited shelf life may occur.

Lemons: Small lemons remain in tight supply. Some suppliers will not accept new orders for smaller sizes until supplies improve.

Navels: Domestic Navels are set to begin in November.

Valencias: California Valencias are winding down for the year and should finish in November.

West Coast Lettuce

Iceberg: EXTREME Lettuce quality is fair and supplies are extremely limited. Prorates should be expected. There has been an increase of disease and insect pressure. We have seen some reports of internal burn, wind burn, and soil-related defects. We are also seeing smaller heads and light weights. The market continues to rise quickly. The rest of the Salinas season will be challenging for Lettuce. Lettuce remains at the extreme trigger.

Iceberg VA: EXTREME Quality is fair and supplies are extremely limited. Prorates should be expected.

Romaine & Romaine Hearts: EXTREME Supplies and quality are fair. There have been reports of light weights, tip and fringe burn. We are seeing high core, soil concerns, and insect pressure. Yields are being affected. Baby Romaine disease pressure has also increased, and supplies will be light. All Romaine items are now at the extreme level. Growers are holding to strict averages when they can but prorates should be expected.

Romaine VA: ESCALATED Quality and supplies are fair. We are still seeing more core in the bags and some mildew. Growers are holding to strict averages when they can but prorates should be expected.

Boston/Butter Lettuce: EXTREME Quality is good, but supplies are limited.

Green Leaf, Better Burger and Red Leaf: EXTREME Quality is fair and supplies are limited.

Green Bell Pepper: WATCHLIST Supply is lighter out of California this week and markets are expected to firm up; Coachella is about two weeks out. Lighter supply out of the East due to ongoing rain and quality issues.

Color Bell Pepper: Supply is tightening this week as coastal California regions begin to wind down for the season, and we prepare for Transition to the desert. The Hothouse Pepper category has also turned the corner and firmed up.

Jicama: Good supply and good quality available.

Mini Sweet Pepper: Supply lighter this week and expected for the next several weeks. Quality is good.

Mixed Chili Pepper: Supplies are lighter this week on several varieties: Poblano, Thai Chili and Serrano. Mainland Mexico, Baja and local programs in California remain the primary growing areas as well as the East Coast. Red Fresnos seem to be the shortest, and we see much higher prices per pound than normal.

Tomatillo: Good supply and quality available this week.

Eggplant: WATCHLIST Central Valley volume is steady while local programs in the East (Tennessee, North Carolina and Michigan) were limited this week. Overall quality is good.

Slicer Cucumbers: Supplies crossing through Otay Mesa and McAllen are much improved with stable volume available. In the East, we are seeing good supply out of Tennessee and Michigan. Quality is good from all shipping points.

English Cucumbers: Steady supply and softer markets are putting downward pressure on the spot market this week out of Mexico and Canada. Quality is good.

Pickles: Lighter supply is available out of Georgia, Florida, and Tennessee this week. Markets remain firm and quality is good.

Green Beans: WATCHLIST Round Type: Local deals are winding down out of Virginia and Michigan as we transition to South Georgia. Overall supplies on the east and west coast are lighter this week and markets firm. Quality is mixed by region.

French Beans: WATCHLIST French bean supplies remain extremely tight as demand continues to increase due to ongoing challenges affecting asparagus and broccoli availability. Vessel delays along the East Coast are placing additional pressure on imported supply and further limiting product availability. Tight supplies and elevated markets are expected to continue throughout the holiday season.

Zucchini/Yellow Squash: ESCALATED Very tight supply and higher demand have pushed pricing higher this week on Green and Yellow Squash out of Michigan, Virginia and California. We expect to see volatility in these markets over the next 2-3 weeks at minimum, and we should see some price relief as growers break early fall blocks and production increases. Quality is good.

Herbs: WATCHLIST Basil production, quality, and supply remain good across both regions. On the East Coast, all Herbs, including imported Chervil, are readily available. On the West Coast, most Herbs have steady supplies and fair quality, although Chervil, Thai Basil, Tarragon, and Marjoram remain limited due to heat.

HERB	SUPPLY	QUALITY	COUNTRY OF ORIGIN
Arugula	Steady	Steady	USA
Basil	Steady	Steady	MEX
Opal Basil	Steady	Steady	USA
Thai Basil	Steady	Steady	USA/MEX
Bay Leaves	Steady	Steady	USA/COL
Chervil	Steady	Steady	USA
Chives	Limited	Steady	MEX

Savory	Steady	Steady	USA
Sorrel	Steady	Steady	USA
Tarragon	Limited	Steady	MEX
Thyme	Steady	Steady	USA/MEX
Lavender	Steady	Steady	USA
Lemon Thyme	Steady	Steady	USA
Lime Leaves	Steady	Steady	USA

Melons

Overlook: California production has ended, and the transition to the desert is complete. Very light offshore volume may become available by the second week of November.

Cantaloupe: Production consists mostly of 9-count and 12-count fruit, with very few jumbos, which is typical for this time of year. Fruit has a slightly greener cast, but internal quality has been very good. Brix levels have settled mostly in the 12%–14% range. Due to rain during the growing cycle, some fruit may have dried dirt on the exterior. Harvest crews are working to clean the melons as thoroughly as possible while keeping pace with harvest volumes.

Honeydew: Current production consists almost entirely of jumbo fruit. Since last week, sizing has peaked at 4Js and 5Js, leaving 6s and 8s in very limited supply. We are exploring alternative ways to meet demand for smaller fruit, including packing 6Js or sourcing honeydews to ship with cantaloupes. As is typical for Yuma, honeydews may show some external scarring but are of sound overall quality.

Watermelon: The market is starting to transition the late-season US crop from Texas to imports. Most imports will start coming from Mexico. Pricing is steady even with lower supplies as demand tapers off. Quality throughout the growing regions has been good.

Mixed Vegetables

Artichokes: Quality and supplies have improved.

Asparagus: ESCALATED Asparagus supplies had been improving from Mexico and Peru; however, production is expected to decline moving forward. Peruvian volumes are projected to decrease by nearly 30% next week and continue trending downward through January, while Mexican production remains below expectations. Supplies are expected to remain extremely tight through the end of the year, with limited availability across most sizes. Pricing will likely remain significantly higher than normal as production declines and holiday demand increases.

Bok Choy: Quality is okay and supplies are limited.

Broccoli Florets/Broccoli Crowns: Quality is good, and supplies have improved. Reports of browning and pin rot continue. Given the heavy insect pressure, we will continue to monitor this item.

Broccolini and Sweet Baby Broccoli: Quality is good, but supplies are limited. Growers are holding to average order volumes, and we will continue to monitor this item due to ongoing heavy insect pressure.

Brussels Sprouts: ESCALATED Quality is good and supplies have improved but remain limited.

Carrots (JUMBOS, MEDIUMS and CELLOS): Quality and supplies are good.

Cauliflower: Quality is okay. Supplies have improved. Insect pressure is still affecting some yields.

Celery: Quality and supplies are good. Organic Celery remains at the extreme level.

Corn, Sweet: We are seeing a split market with good supply available in the East while the West markets remain lighter than usual as we transition back to California, which is the primary shipping point for the West Coast Brentwood corn volume is light this week. In the East, we continue to see steady numbers out of Georgia. Quality is good out of all regions.

Fennel: Quality and supplies have improved.

Kale: Quality and supplies look good.

Leeks: Quality and supplies look okay.

Garlic: Quality remains good, although supply is snug on this Garlic crop. Continue to purchase steadily to ensure product as the year progresses.

Ginger: Supplies and markets are steady.

Green Cabbage: ESCALATED Quality looks good, but supplies are tightening up. Prorates should be expected. The market is rising and there is heavy insect pressure that is reducing harvestable yields.

Green Onions: EXTREME Quality is fair, with insect damage and smaller sizes reported. Supplies remain limited but are improving. Growers will continue to hold to strict averages but should be able to fill those average order volumes.

Mushrooms: WATCHLIST Extra volume is expected to decrease over the coming weeks as retail demand increases ahead of the holidays. Thanksgiving is just a month away! Overall quality is good; however, green mold may affect production in northern growing regions. Cremini volumes have declined significantly, potentially due to this issue. We are not currently experiencing problems with our grower partners, but prorates may occur over the coming weeks. We have been advised that cremini production could be affected through November.

Napa Cabbage: ESCALATED Quality is good, but supplies are tightening up.

Parsley (Italian & Curly): Quality is good, but supplies are tightening up. Italian Parsley 60ct is escalated.

Rapini: Quality is good, but supply continues to be light. The market is strong; therefore, supplies are expected to remain light.

Red Cabbage: ESCALATED Quality looks good, but supplies are light.

Spinach: Quality is good, but supplies are limited. October is expected to be a roller coaster for this item. Insect activity has increased, and yields will be affected.

Spring Mix: Supplies are limited and quality is okay. We are starting to see some decreased shelf-life. All Leafy Greens are affected by disease pressure.

Snow Peas and Sugar Snaps: ESCALATED Snow pea and sugar snap supplies from Guatemala remain extremely limited, and markets remain highly active. Domestic availability is constrained by back-to-back weather challenges and field transitions, adding further pressure to overall supply.

Onions:

The transition to the NW, Washington, Oregon, and Idaho is done. Overall, the market is still struggling to keep up with demand, elevating open market pricing. NW suppliers are reporting less volume on colossal and super colossal sizing due to extended periods of smoke from neighboring wildfires and heat.

Potatoes: WATCHLIST

Growers are shipping new crop Potatoes, and some will start adding volume into storage in the upcoming weeks. With less acreage, issues with water and high nighttime temperatures, larger 40-70 count Potatoes are limited and will remain that way throughout the season. Suppliers are still hoping that Potatoes will size up over the next couple of weeks. Smaller 80-120 count Potatoes have better availability. Current market pricing remains elevated and getting stronger on bigger Potatoes.

Sweet Potatoes: WATCHLIST Growers have started to harvest the new crop and will put them in storage to let the skin set before shipping. This will take 3-4 weeks before we start to see the new crop shipped out. Limited old crop supplies remain available nationwide, putting a premium on all sizes. Demand from both retail and foodservice continues to be steady to strong, supporting a firmer market. Quality has been fair to poor as we finish up the old crop.

Tomatoes:

Tomato Suspension Agreement Update

Currently, duties are being imposed on Mexican Tomatoes. We do expect to see some reporting from the ITC on the impacts of duties and anti-dumping violations sometime this year. No major immediate changes are anticipated.

Q4 Updates: Quarter 4 is upon us, and we need to remember this can be the most challenging time of year for the Tomato supply chain with local and seasonal production winding down for the season. We will begin transitioning to Florida in the coming weeks as well as Mainland Mexico for the winter months; with a Super El Niño season expected we want to be prepared for any vulnerability to weather-related pressure on supply. We will continue to monitor the weather in all growing regions as well as receive updates from our grower partners and provide that information to you as soon as possible.

East Coast

- Round Tomatoes: ESCALATED Volume is mixed this week, and demand continues to exceed supply. Quality also varies across regions. Georgia should see additional volume this week; however, it will not be enough to meet demand. We do not expect relief from Florida for another three weeks.
- Roma Tomatoes: ESCALATED Supply will remain light in South Georgia this week and should begin improving next week, with additional volume anticipated the following week. Quality is fair at best due to weather-related pressure. As with round tomatoes, significant relief is not expected until Florida production ramps up.
- Snacking Tomatoes: Grapes, Grape Medley and Cherry Tomato: EXTREME Volumes of cherry, grape, and medley tomatoes are very light this week due to weather-related pressure in South Georgia. Supply interruptions may occur across the entire category in the East until Florida production begins. Quality is fair at best. We expect market volatility over the next two to three weeks.

Mexico

- Round Tomatoes: ESCALATED Supply will be tighter on all sizes this week, particularly the larger sized fruit. This scenario, combined with overall higher demand, will keep prices higher this week. Quality is outstanding on what is crossing this week.
- Roma Tomatoes: ESCALATED Stable supply and quality available out of Jalisco and Baja. Demand is very good this week putting upward pressure on prices. The driver for this is high demand from the East and lower production numbers out of Baja.
- Snacking Tomatoes: Grapes, Grape Medley and Cherry Tomato: EXTREME A combination of events between the east coast and west coast being shorter than expected, markets will be firm across the category out west with possibilities of supply interruptions. Quality on the product loading in the west is far better than the east on all varieties.

California

- Supply has been stable on Rounds; however, larger sizes seem to be limited and drawing a premium; Roma have been mostly stable as well. General call prices are up this week as demand from the East was higher due to the ongoing rain in Central Tennessee and surrounding areas. Quality has been mostly consistent across California; we should start to see volume start to decline daily as the season is expected to wrap up in approximately three weeks.

Other Fruit:

Apples: New crop Gala Apples are being harvested, and inventory is building up. Granny Smiths are reported to have good sizing available. Red Delicious sizing is on the larger end, 56-80ct. Fuji and Gold Delicious both have very limited storage supplies left, and new crop will start soon. New crop Honeycrisp Apples have started, and good volume is available.

Pears: D'Anjou availability is limited; volume from both domestic and imports has dried up. The market remains stable, with new crop Bartletts. Red D'Anjou Pears are moderately available in U.S. #135-55ct sizes and should remain in the market for another couple of weeks. Bosc Pears are currently gapping until their respective new crop harvests.

Persimmons: New crop FUYU available out of California.

Pomegranate: Good supply available; New Crop out of California.

Asian Pears: Lighter volume, good supply on larger sizes.

Cherries: None or very limited supply available. Quality is not the best and will not improve until offshore starts.

Stone Fruit: Peaches and Nectarines are winding down out of California and other local regions. Good supply is still available on late season Plums.

Papaya: Maradol are steady out of Mexico, while Solos and Hawaiians are tight.

Mangoes: Steady supply out of Mexico and Brazil. Varieties: Tommys, Kents, Palmer and Keitts.

Kiwi Fruit: Supplies are fair out of Chile; California Kiwi Berries available. Some Golden Kiwis are also available.

Quince: Limited supply available this week.

Figs: Black Mission and Brown Turkey available out of California.
