

# SPECIALIZED INSURANCE COVERAGE FOR HIGH-VALUE TOOLS WHILE UNDERGROUND

For more than three decades, Transpac Managers has helped reduce our clients' exposure by insuring their tools and providing protection against losses when tools are lost, stuck, or damaged while operating downhole.

Transpac is recognized as a leader in Downhole Tool Insurance and are expanding coverage to multiple industries by providing coverage for underground equipment that is often excluded under the Underground Property Exclusion in Contractors Equipment Policies (CEP). Transpac offers specialized insurance solutions designed to protect equipment and operations across a range of industries.

As an official Lloyd's Coverholder, our team delivers customized underwriting programs that help companies manage risk while insuring critical tools and equipment operating in demanding environments.

## What Makes Transpac Different?

- **Deep Technical Understanding:** Decades of experience insuring complex tools and equipment used in drilling, logging, and industrial operations.
- **Customized Insurance Programs:** Coverage designed around the operational realities of each client's equipment, contracts, and project environments.
- **Flexible Coverage Structure:** Coverage can be written on a primary or first-dollar basis or structured to complement contractor-provided coverage programs.
- **Responsive Underwriting:** Efficient quoting and program structuring with coverage often available with as little as 24 hours' notice.
- **Cost-Efficient Coverage:** Programs designed around actual operational exposure, ensuring clients only pay for coverage when equipment is actively deployed.

# INDUSTRIES WE SERVE

## OIL & GAS

- Drilling Operations
- Wireline Logging
- Coiled Tubing
- Fishing Coverage

## Pipeline

- Inline Inspection (ILI) Tools
- Smart Pigs
- Recovery of Tools

## Construction

- Horizontal Directional Drilling (HDD)
- Pipe Jacking
- Microtunneling

## Geothermal

- Drilling Operations
- Wireline Logging
- Fishing Coverage

## Mining

- Tunneling/Drilling Equipment
- Surveying and Inspection Tools
- Specialized Mining Equipment

# PROGRAM ADVANTAGES

Protection for high-value tools and specialized equipment

Coverage designed for complex industrial operations

Flexible structures for project-based exposures

Discounts available for multi-well or multi-project programs

Access to globally recognized insurance markets

# PROTECT THE EQUIPMENT THAT POWERS YOUR OPERATIONS

# OIL & GAS

## DRILLING TOOLS & WIRELINE LOGGING

The Downhole Tool Program is designed for oil and gas operators with active drilling programs, as well as directional drilling and wireline contractors. This coverage is typically required for operations involving horizontal and directional wells that rely on high-value downhole tools. The program provides protection for scheduled equipment while it is deployed downhole.

Coverage protects scheduled tools at replacement cost while downhole if they become stuck, lost, or damaged during drilling or logging operations. Insured parties can choose 100% or 50% coverage, helping control risk and manage costs across multiple wells.

### What's Covered?

- Drilling Operations
- Coiled Tubing
- Wireline Logging
- Fishing Coverage

### Key Highlights:

- Multi-well drilling program discounts available up to 15%
- Simple application process allows multiple wells to be approved with a single submission
- Deposit required only for the first well, helping maintain cash flow
- Most wells approved within 24 hours for fast operational turnaround

Contact Transpac Managers to learn more about the Downhole Tool Program and ensure you're covered on your next drilling or logging operation.

# PIPELINE

## INLINE INSPECTION TOOLS & RECOVERY COSTS

The Pipeline Inspection Program is designed for pipeline operators and inspection service contractors responsible for inline inspection (ILI) equipment. This provides coverage if inspection tools become stuck or damaged while operating inside a pipeline, including the costs associated with recovering stuck ILI tools.

Coverage protects scheduled tools at replacement cost while inside a pipeline if they become stuck or damaged during inspection operations. Insured can choose 100% or 50% coverage, helping control risk and manage costs across multiple inspection runs.

### What's Covered?

- Inline Inspection Tools
- Smart Pigs
- Recovery of Tools

### Key Highlights:

- Covers recovery costs associated with retrieving stuck inspection tools that were insured.
- Simple application process allows multiple inspection runs to be approved with a single submission
- Most inspection runs approved within 24 hours for fast operational turnaround

Contact Transpac Managers to learn more about the Pipeline Inspection Tool Program and ensure you're covered on your next pipeline inspection operation.

# CONSTRUCTION

## TRENCHLESS DRILLING OPERATIONS

The Underground Tool Program is designed for contractors performing trenchless drilling operations beneath rivers, urban infrastructure, wetlands, and subsea environments. The program provides coverage for scheduled equipment while it is deployed underground.

Coverage protects scheduled tools at replacement cost while underground if they become stuck, lost, or damaged during drilling operations. Insured can choose 100% or 50% coverage, helping control risk and manage costs across multiple jobs.

### What's Covered?

- Horizontal Directional Drilling (HDD)
- Pipe Jacking
- Microtunneling

### Key Highlights:

- Multi-job program discounts available up to 15%
- Simple application process allows multiple jobs to be approved with a single submission
- Most jobs approved within 24 hours for fast operational turnaround

Contact Transpac Managers to learn more about the Underground Tool Program and ensure you're covered on your next trenchless drilling operation.

# GEOHERMAL

## DRILLING TOOLS & WIRELINE LOGGING

Designed for geothermal drilling operators, directional drilling providers, and wireline contractors. Coverage is typically required for horizontal and directional operations that rely on high-value downhole tools. The program provides protection for scheduled equipment while it is deployed downhole.

Coverage protects scheduled tools at replacement cost while downhole if they become stuck, lost, or damaged during drilling or logging operations. Insured can choose 100% or 50% coverage, helping control risk and manage costs across multiple wells.

### What's Covered?

- Drilling Operations
- Wireline Logging
- Fishing Coverage

### Key Highlights:

- Simple application process allows multiple wells to be approved with a single submission
- Deposit required only for the first well, helping maintain cash flow
- Most wells approved within 24 hours for fast operational turnaround

Contact Transpac Managers to learn more about the Geothermal Downhole Tool Program and ensure you're covered on your next geothermal drilling or logging operation.

# MINING

## MINING EQUIPMENT UNDERGROUND

The Mining Underground Tool Program is designed for contractors performing Mining Operations where tools are being used inside mines or shafts. The program provides coverage for scheduled equipment while it is deployed underground.

Coverage protects scheduled tools at replacement cost while underground if they become stuck, lost, or damaged during mining operations. Insured can choose 100% or 50% coverage, helping control risk and manage costs across multiple jobs.

### What's Covered?

- Tunneling/Drilling Equipment
- Surveying and Inspection Tools
- Specialized Mining Equipment

### Key Highlights:

- Simple application process allows multiple projects to be approved with a single submission
- Deposit required only for the first job, helping maintain cash flow
- Most jobs approved within 24 hours for fast operational turnaround

Contact Transpac Managers to learn more about the Mining Underground Tool Program and ensure you're covered on your next mining operation.
