# PRESS ANNOUNCEMENT

**FOR IMMEDIATE RELEASE**

## Sky Peak Technologies Recognizes CTO Don McIntosh for Distinguished Career Achievements and Professional Honors

### A Career Defined by Technical Leadership and Industry Impact

Don McIntosh was inducted into the **Academy of Electrical and Computer Engineers (AECE)** at **Missouri University of Science and Technology**—formerly the University of Missouri–Rolla—during the Academy's annual meeting. His induction followed a nomination by a faculty member in recognition of his professional accomplishments and sustained impact on the field.

Election to the **Academy of Electrical and Computer Engineers** represents one of the highest forms of recognition from Missouri S&T, honoring alumni whose careers exemplify professional excellence, innovation, and leadership in engineering disciplines.

In addition, Don was recently **elevated to Senior Life Member status in the Institute of Electrical and Electronics Engineers (IEEE)**, a distinction reserved for engineers whose careers reflect decades of sustained contributions to the profession, technical leadership, and service within the global engineering community.

"These honors recognize not only Don's technical depth, but the influence of his work across generations of communications technology," said **Cat McIntosh**, **CEO** at Sky Peak Technologies. "His leadership continues to shape how we think about network intelligence, video optimization, and the future of autonomous mobile platforms."

At Sky Peak Technologies, Don serves as CTO, where he leads the technical vision behind **CORA AI**, the company's real-time video optimization and network efficiency platform. His work continues to influence next-generation approaches to adaptive bitrate management, mobile network intelligence, and scalable wireless infrastructure.

## About Sky Peak Technologies

Sky Peak Technologies develops novel, intelligent technologies that enable organizations to operate more sustainably, more profitably, and in greater service of humanity. The company is currently addressing one of the most significant cost and efficiency challenges in the rapidly expanding global streaming economy: the delivery of video over mobile networks. As legacy approaches strain to meet modern demand, Sky Peak Technologies takes a fundamentally different path—optimizing content at the device level through device intelligence rather than costly, invasive infrastructure. Its flagship platform, **CORA AI**, reduces data and energy consumption while improving user experience, network performance, and economic outcomes for mobile operators and enterprise users worldwide. While mobile communications serve as the company's proving ground, Sky Peak Technologies' broader vision is to enable smarter, more efficient digital delivery at global scale—creating measurable benefits for businesses, consumers, and the planet.
